ENVIRONMENTAL AND SOCIAL IMPACT ASSESSMENT STUDY REPORT
FOR
THE PROPOSED AFFORDABLE HOUSING DEVELOPMENT ON
PLOT L.R. NO.209/20159 ALONG KINSASHA ROAD IN
PARKROAD AREA OF NAIROBI CITY COUNTY.

This Environmental and Social Impact Assessment (ESIA) Study Report is submitted to the National Environment Management Authority (NEMA) in conformity with the requirements of the Environmental Management and Coordination Act, Cap 387 and the Environmental (Impact Assessment and Audit) Regulations, 2003

EIA Firm of Experts:
Space Planners Ltd,
P.O Box 157 – 00600, Nairobi.

Project Proponent:
The Trustee,
Ministry of Transport, Infrastructure,
Housing and Urban Development,
P.O Box 30007,
Nairobi
DECLARATION

This Environmental and Social Impact Assessment Study Report for Proposed Affordable Housing Development on Plot LR No. 209/20159 located along Kinsasha Road in Park Road Area of Nairobi City County has been prepared by Space Planners Limited, a registered and licensed EIA/EAA firm of Experts (NEMA Reg. No. 10,492) in accordance with the Environmental Management and Coordination Act Cap 387 and the Environmental (Impact Assessment and Audit) Regulations, 2003 for submission to the National Environment Management Authority.

Signature/Official Stamp: …………………………………… Date: …………………

EIA/EAA Firm of Experts: Space Planners Limited

                          |                          | detailed design and installation |
| Eng. John Litondo     | Mechanical Engineer | Consultant in mechanical design and installation for the project |
Executive summary

Introduction
The 2010 Constitution of Kenya identifies access to adequate housing and to reasonable standards of sanitation as an economic and social right and yet the housing situation in Kenya, just like in most developing countries is such that the demand far outstrips supply, leaving many Kenyans to live in deplorable conditions. Over the years, the country has made remarkable strides in a bid to address decent housing but more is required for majority of Kenyans to realize this constitutional right. The most affected population being the low income groups which constitutes a large proportion of the productive population in Kenya.

The government recently unveiled its plan to ensure that all Kenyans enjoy their right to decent housing through an initiative dubbed ‘The National Affordable Housing Programme’ in the Big Four Agenda whose aim is to enable the low to middle income citizens of Kenya acquire homes at subsidized prices. The government intends to construct 500,000 housing units distributed all over the 47 counties by 2022.

These developments just like any other, may impact the social and environmental aspect of the neighborhood they are located at. Therefore, the need to pursue sustainable development guided by environmental, social, cultural and ethical considerations has to be accorded the highest priority. The Kenyan government has harmonized environmental laws under the Environmental Management and Coordination Act (EMCA), Cap 387, for the purposes of coordinating environmental management efforts to conserve the environment for the current and future generations. It is in pursuit of this piece of legislation that the project proponent has commissioned the environmental experts to carry out the ESIA for the proposed affordable housing development as well as prepare an ESIA study report. The proposed project entails the construction of six blocks, four of them housing one, two and three bedroom units, one block housing a parking silo, and another housing a kindergarten and other auxiliary facilities. It will be located on LR No. 209/20159 along Kinsasha Road in Park road Area of Starehe Sub County of Nairobi City County.

The project aims at addressing the housing facilities shortage in the city as manifested by overcrowding and spread of slums and squatter settlements in many parts of Nairobi where the low and middle-income urban population is forced to live in dilapidated conditions, with no
security of tenure, limited access to water, sewerage and power systems, and a myriad of security issues.

**Scope**
The study covered the physical extent of the project site and its immediate environs, documenting the baseline data, legal and regulatory framework relevant to the project, analysis of the project alternatives, assessing the environmental impacts and development of feasible mitigation measures for the negative impacts including designing Environmental and Social Management and Monitoring Plan (ESMMP) for the project.

**The objective of the project**
The objectives of the proposed development are:

i. To construct **1,370 housing units** in Park road area of Nairobi City County.

ii. To put the current land into more productive and economic use while conserving the environment and ensuring inclusivity.

**The objectives of undertaking the EIA were to:**

i. To identify potential environmental impacts of proposed project and assess the significance of these impacts.

ii. To assess the relative importance of the various project alternatives.

iii. To propose mitigation measures for the significant negative impacts of the project on the environment.

iv. To seek the views and concerns of all the Project Affected Persons (PAPs) in regards to the proposed project.

v. To generate baseline data for monitoring and evaluation of how well the mitigation measures are being implemented during the project cycle.

vi. To develop comprehensive Environmental Management Plan (EMP) for the project cycle with mechanisms for monitoring and evaluating the compliance and environmental performance which shall include the cost of mitigation measures and the time frame of implementing the measures.

vii. To present the results of the EIA in such a way that they can guide informed decision making.
Methodology
The methodology of this study included: mobilization and planning, desk review of documents and relevant data, field visits to the project area to collect baseline data; project data synthesis; public consultation and participation. A number of stakeholders were consulted for their inputs to the study through public meeting (baraza), key informant interviews and completion of qualitative questionnaires, preparation of the ESIA Study Report and submission to National Environment Management Authority (NEMA).

Environmental Impacts and Mitigation Measures
The positive impacts associated with the proposed development include but are not limited to: provision of standard affordable housing units for Kenyans, provision of employment opportunities throughout the project cycle, create market for goods and services, infrastructure expansion such as roads, improved security in the area, enhanced social cohesion and inclusivity and improvement of the living standards of people living in Park Road area.
The potential negative environmental impacts of the proposed project and mitigation measures are summarized below:

<table>
<thead>
<tr>
<th>Possible Impact</th>
<th>Mitigation Measures</th>
</tr>
</thead>
</table>
| Traffic congestion         | ▪ Develop a traffic management plan to ensure smooth flow of traffic along access roads  
conversation.                  |
|                            | ▪ Employ traffic marshals to control traffic in and out of site                                                                                   |
|                            | ▪ Ferry building materials during off-peak hours                                                                                                  |
|                            | ▪ Provide traffic control signs at the site/entrance to notify motorists and general public about the proposed development                            |
|                            | ▪ Enforce speed limits for the construction vehicles especially along the adjacent roads leading to the site                                    |
|                            | ▪ Provide adequate entry and exit points for both motorized and non-motorized traffic to ease movement.                                             |
|                            | ▪ Expand the access road to accommodate more vehicular traffic introduced in the area                                                           |
| Increased water demand     | ▪ Use water bowsers and tankers from external sources during construction.                                                                       |
|                            | ▪ Encourage re-use of water where possible during construction and operation phase.                                                              |
|                            | ▪ Provide roof and underground water storage tanks                                                                                               |
|                            | ▪ Provide alternative sources of water (borehole) and adequate storage facilities.                                                               |
| Storm water drainage | • Leveling of the site to reduce pooling of water during the construction  
  • Semi permeable materials shall be used for construction of pavements.  
  • Landscaping on the open areas shall be done to promote efficient management of storm water runoff.  
  • Repair and maintenance of open drains within the site. |
|----------------------|----------------------------------------------------------------------------------------------------------|
| Air Pollution        | • Regular monitoring of the quality of air throughout the construction period  
  • Screening of the construction site to contain and arrest construction-related dust.  
  • Dust suppression with water-sprays during the construction phase on dusty areas.  
  • Exposed stockpiles of e.g. sand, shall be covered and watered daily.  
  • Regular and prompt maintenance of construction machinery and equipment to minimize generation of hazardous emissions.  
  • Comply with EMCA (Air quality) Regulations 2014 |
| Noise and Excessive Vibrations | • Construction works shall be carried out during the day  
  • Provide and enforce use of Personal Protective Equipment (PPEs) e.g. earmuffs and helmets during construction.  
  • The use of noise shields on noisy equipment.  
  • Monitor Noise and Excessive Vibrations levels especially during excavation as per the regulations |
| Increased solid waste | • Proper disposal of construction waste in designated areas.  
  • Segregation of waste at the source by providing labelled bins for each kind of waste e.g. organic/biodegradable wastes, dry wastes, etc  
  • Provision of waste management facilities such waste bins on each floor  
  • Engage the services of NEMA registered waste collector to dispose the waste at designated areas  
  • Use of an integrated solid waste management system through a hierarchy of options: source reduction, recycling, composting and reuse  
  • Comply with the Waste Management Regulations 2006 |
| Increased liquid waste | • Channel liquid waste to the trunk sewer system  
  • Conduct routine inspection and monitoring of the internal sewer system to identify leakages and blockages  
  • As provided for by the Building Code, sanitary facilities shall |

Conclusion and Recommendations

The successful implementation of this affordable housing project not only gives low and middle income earners living in Nairobi an opportunity to own a decent home for their families but also brings together individuals from diverse cultures and income groups and in turn promotes cohesion and social integration. What’s more, the project will create employment opportunities for many Kenyans, improve the aesthetic and economic value of Park Road area, lead to improvement of basic infrastructure and public facilities within the area such as access roads and increase the national and county governments’ tax revenues, just to mention a few.

Major concerns should however be focused towards minimizing the occurrence of impacts that would degrade the general environment. To greatly work in synchrony with the environment and ensure its sustainability, the proponent shall proceed with careful consideration of the prescribed mitigation measures through close follow-up and implementation of the recommended Environmental and Social Management and Monitoring Plans. It is hereby recommended that the project be granted the required EIA license so as to implement the project.

CHAPTER ONE: INTRODUCTION

1.1 General Overview

Decent affordable housing is generally defined as housing that consumes less than 30 percent of a family’s income and often enables families to enjoy stability, good health, employment, education, and recreation. Affordable housing programmes in turn contribute to the physical, economic, environmental, and social wellbeing and sustainability of communities (Millennial Housing Commission, 2002).

The most recent statistics from the National Housing Corporation reveal that the country has a cumulative housing deficit of 2 million housing units, which grows by 200,000 units annually. This is due to the rapid population growth of 2.6 per cent per annum, compared to the global average of 1.2 per cent, and an urbanization rate of 4.4 per cent against the global average of 2.1 percent. This means that Nairobi City County welcomes 0.5 million new city dwellers annually.

According to the World Bank (2011), the city was estimated to have 3.2 million residents, 1 million of which lived in slums, with only 3 per cent living in houses with permanent walls, electricity and water.

An article by Aden Van Noppen’s on ‘The ABCs of Affordable Housing in Kenya’, reveals that the housing challenge is evidently extreme. The average price for an apartment in the capital city of Nairobi is currently KES 11.58M (USD 136,000), up from KES 5.2M (USD 61,000) in December 2005. There is no home on the formal market below KES 2M (USD 23,000), a level that is still completely unaffordable to low-income populations. There is a lot of concentration of property development in the high-income category although the demand for housing is most acute in the middle and low income categories. Some of the reasons behind this include availability of mortgage finance to Kenyans at the higher income end and insufficient serviced land that could be set aside for low income housing, with banks preferring to lend to salaried people, those who run their own businesses find it difficult to get financiers.

The prevailing situation has seen the implementation of various efforts and strategies to improve the housing situation in Nairobi and the country at large in order to meet the ever rising demand. Reference is made to the ‘Big Four Agenda’ by the government whose goal (among three others) is to provide affordable housing for all Kenyans. The housing programme aims at providing approximately 500,000 housing units to lower income households and other underserved populations in all forty seven counties by 2022; 30,000 of them will be constructed.
in the first phase to account for at least 30 per cent of the current city housing market (Parliamentary Service Commission, 2018)

It is in this light that the developer, **Ministry of Transport, Infrastructure, Housing and Urban Development**, proposes to develop **1370 residential units** on plot LR No. **209/20159 located along Kinsasha Road in Park Road area of Nairobi City County** as the first affordable housing project to meet the increasing demand for standard, habitable and affordable houses while adhering to environmental best practices, Nairobi City County Zoning Regulations as well as other relevant laws.

**Overview of the Study**

The sustainability of developments must be seriously taken into consideration right from the design stage. The proponent recognizes that they have a responsibility to the environment beyond legal and regulatory requirements and are committed to minimizing environmental impacts and continually improving and monitoring the environmental performance of the proposed development and its surroundings and has therefore engaged the environmental experts to carry out the ESIA for the proposed development in accordance with the EMCA, CAP 387.

The Environmental Management and Coordination Act (EMCA), was enacted to ensure that projects or developments of this nature erected in the country are environmentally friendly, safe and sustainable. The Act further provide guidance by installing legal, policy and institutional frameworks key to the efficient management and coordination of environmental resources in the country. These principles were later enshrined in the Constitution of Kenya, 2010 through Article 42 that advocates for all people to live in a clean and healthy environment. Proposed developments should, therefore, be subjected to a rigorous assessment with regard to their environmental and social impacts (physical, socio-economic and biological). This is carried out through the Environment and Social Impact Assessment (ESIA) report as guided by the EMCA and subsidiary regulations.

Due to the scale of the development this study was carried out to identify the environmental and social impacts of projects as well as provide mitigation measures for the identified negative issues throughout the project cycle i.e. construction, occupational and decommissioning phases.
1.2 Objectives of the ESIA

Environmental and Social Impact Assessment (ESIA) is a process having the ultimate objective of providing decision makers with an indication of the likely environmental and social consequences of a proposed activity. The main objectives of this ESIA therefore include the following:

i. To identify potential environmental impacts of proposed project and assess the significance of these impacts.

ii. To assess the relative importance of the various project alternatives.

iii. To propose mitigation measures for the significant negative impacts of the project on the environment.

iv. To seek the views and concerns of all the Project Affected Persons (PAPs) in regards to the proposed project.

v. To generate baseline data for monitoring and evaluation of how well the mitigation measures are being implemented during the project cycle.

vi. To develop comprehensive Environmental Management Plan (EMP) for the project cycle with mechanisms for monitoring and evaluating the compliance and environmental performance which shall include the cost of mitigation measures and the time frame of implementing the measures.

vii. To present the results of the ESIA in such a way that they can guide informed decision making.

1.3 Terms of Reference (TOR)

A scoping exercise was undertaken to identify the fundamental issues to be addressed in the study and feasible project alternatives. During the exercise, terms of reference (TOR) were developed and submitted to the authority in line with section 11 of the EIA Regulations and approved on 26th February, 2019. (Attached is the TOR approval letter).

The following are the TOR developed during the scoping exercise:

i. the proposed location of the project;

ii. a concise description of the national environmental legislative and regulatory framework, baseline information, and any other relevant information related to the project;

iii. the objectives of the project;
iv. the technology, procedures and processes to be used, in the implementation of the project;

v. the materials to be used in the construction and implementation of the project;

vi. the products, by-products and waste generated project;

vii. a description of the potentially affected environment;

viii. the environmental effects of the project including the social and cultural effects and the direct, indirect, cumulative, irreversible, short term and long-term effects anticipated;

ix. alternative technologies and processes available and reasons for preferring the chosen technology and processes;

x. analysis of alternatives including project site, design and technologies and reasons for preferring the proposed site, design and technologies;

xi. an Environmental Management Plan proposing the measures for eliminating, minimizing or mitigating adverse impacts on the environment; including the cost, time frame and responsibility to implement the measures;

xii. provision of an action plan for the prevention and management of foreseeable accidents and hazardous activities in the cause of carrying out activities or major industrial and other development projects;

xiii. the measures to prevent health hazards and to ensure security in the working environment for the employees and for the management of emergencies;

xiv. an identification of gaps in knowledge and uncertainties which were encountered in compiling the information;

xv. an economic and social analysis of the project;

xvi. an indication of whether the environment of any other state is likely to be affected and the available alternatives and mitigating measures.

1.4 Methodology

The methodology used for preparation of this ESIA report is stated in the steps below:

i. Screening of the project in line with legal notice No. 150 of 2016 of EMCA Cap 387. We established that the development falls under High Risk Projects (Urban development including establishment of new housing estate developments exceeding one hundred housing units) which requires submission of an environmental impact assessment study
report under section 58(2) of the Environmental Management and Co-ordination Act, Cap 387.

ii. A scoping exercise that identified the key issues to be addressed in the assessment.

iii. Documentary review on the nature of the proposed activities, policy and legal framework, environmental setting of the area and other available relevant data/information,

iv. Public participation and discussions with the local community, city officials, local leaders and opinion leaders and the proponent regarding the proposed project.

v. Physical evaluation of the project site and the surrounding areas using a pre-prepared checklist with specific focus on environmental and human safety issues that are likely to be affected,

vi. Reviewing the proposed project designs and implementation plan/schedules with a view to suggesting suitable alternatives,

vii. Developing an ESMMP outline with responsibilities, schedules, monitorable indicators and time frames among other aspects,

viii. Preparation of an ESIA report in accordance with the Environmental (Impact Assessment) Regulations 2003.

1.5 Justification of the project

1.5.1 Demand for housing

In Kenya, the government is obligated to provide about 120,000 habitable housing units annually if it is to meet the current demand, yet only 30,000 are built leaving a housing deficit of over 50% of the housing unit (Hass Consult, 2011) As a result, there is a mismatch in supply and demand therefore an increase in housing prices. This leads to over 60% of the urban dwellers living in slums due to the high urbanization rate of 4.4 which is equal to 0.5 million new dwellers yearly (World Bank, 2011). Section 43(1) (b) of the Constitution of Kenya provides that every person has the right to “accessible and adequate housing and a reasonable standard of sanitation”. However, the jurisprudence on the right to housing, as indeed on other economic and social rights, remains thin. The proposed project attempts to address this challenge while targeting low to middle income earners.

1.5.2 Zoning of the area

Park road area is in Zone 2 in accordance with the Nairobi City Development Ordinances and Zones Guidelines which allows Commercial/Residential Development (High rise Flats, shops,
stalls, hotels and banks). Therefore, the proposed project is in conformity with the zoning of the area. At 7.843 hectares, the plot is large enough to accommodate the proposed development while adhering to the planning standards and policies provided by the County Government.

1.5.3 Socio-Economic Benefits

There will be numerous socioeconomic benefits attributed to the proposed development. The main one being provision of affordable and quality housing units for numerous city dwellers and hence improving their living standards, direct and indirect employment opportunities, increased national and county governments tax revenues, enhanced overall competitiveness of this area hence more development and growth, and increased security in the area. There shall also be the co-benefit of this project to the area by stimulating other land owners within the vicinity to also improve the value of their properties through redevelopment

1.5.4 Neighborhood Development Trend

The neighborhood is currently undergoing urban transformation with the previous residential land being replaced by mixed use development. The proposed development will therefore be in conformity with this trend which will ensure better utilization of the land giving it higher quality and urban character as well as increase its profitability.

Plate 1.1: Neighborhood Characteristics

Source: Field Survey, 27/02/2019
CHAPTER TWO: PROJECT DESCRIPTION, DESIGN AND IMPLEMENTATION

2.1 Nature of the Project
The proposed affordable housing development shall comprise of six blocks; four blocks housing one, two and three bedroom units, one block housing a kindergarten and another housing a parking silo and other supporting facilities within the site. The development aims at providing quality, affordable and decent housing units for middle to low income earners and increase the utility of the land in the area. The site had already been cleared of vegetation to pave way for the development, levelling of the ground and excavation works had begun at the time of our visit. The design of the development has set aside 18 percent of the total land area to open green spaces, 15 percent for roads, utilities and services and 55 percent of the plot for the residential units and parking spaces.

2.2 Project Location and Size
The proposed project site is located along Kinsasha Road, off Park Road on latitude 1°16’28.96”S and longitude 36°49’57.48”E in Park Road Area of Starehe Sub County, Nairobi City County. Notable landmarks include Muslim Primary School which borders the site to the west and Park Road Mosque to the East. The parcel of land to be developed measures approximately 7.843 Ha (Attached is a copy of the ownership documents).
2.3 Land Tenure, Use and Ownership

The parcel of land on which the subject development is proposed is held on leasehold interest for 99 years from 01/09/2014. The certificate of title is drawn under the Land Act, Cap 300 and the Land Registration Act, Cap 334 as Plot L.R. No. 209/20159 and the current registered proprietor is The Cabinet Secretary to the Treasury (as trustee for the Ministry of Transport, Infrastructure, Housing and Urban Development. Post Office Box Number 30007, Nairobi) who is hereby seeking the ESIA License for the proposed project (See attached the ownership document).

According to the zoning ordinances of the county, Park road Area is in zone 2 which allows for high rise residential/commercial developments. The proposed project is therefore in conformity with the zoning of the area.

2.4 Project Description

The project proponent proposes to develop six blocks on the aforementioned land comprising of a total 1,370 housing units, 1048 parking bays and other auxiliary facilities as described below:

i. BLOCK A
   - 38 two bedroom units (60 m²) on six typical floors adding up to 228 units
   - Each unit will comprise of a lounge, a kitchen, two bedrooms, a laundry and washrooms.

ii. BLOCK B
    - 21 three bedroom units (80m²) on 13 floors adding up to 260 units
    - Each unit will comprise of a lounge, a kitchen, three bedrooms, a laundry and washrooms.

iii. BLOCK D
     - 39 three bedroom units (60m²) on 14 floors adding up to 546 units
     - Each unit will comprise of a lounge, a kitchen, three bedrooms, a laundry and washrooms.

iv. BLOCK E
    - Ground and First floor comprising of commercial spaces
    - 7 one bedroom units (30m²) on 12 floors adding up to 84 units.
    - Each unit will comprise of a lounge, a kitchen, a bedroom, a laundry and washrooms
    - 21 two bedroom units (40m²) on 12 floors adding up to 252 units

ESIA Study Report for the Proposed Affordable Housing Development in Park road Area of Nairobi City County.
• Each unit will comprise of a lounge, a kitchen, two bedrooms, a laundry and washrooms

v. BLOCK F (Parking Silo)
• 786 parking bays on seven floors

vi. BLOCK G (Kindergarten)
• 16 classrooms, 8 on each level and four stores.

In summary, the proposed development will constitute one thousand three hundred seventy (1,370) residential apartments comprising of eighty four (84) units of one bedroom, four hundred eighty (480) units of two bedroom apartments and eight hundred and six (806) units of three bedroom apartments.

Other salient features include an additional 262 on-street parking bays, staircases, lift lobbies, ramps, social hall, community green spaces, power distribution room, fire pump room, water storage tanks, telecommunication room and service management room.

. More fine details, specifications and features of the proposed project can be obtained from the drawings (Attached are architectural drawings).

2.5 Construction Inputs
The project inputs will include the following:

i. The materials that shall be used will include stones, cement, sand, crushed rock (gravel/ballast), ceramic fixtures, reinforcement bars, wood/timber, glass, painting materials, plastic, electrical and mechanical fixtures. All these materials shall be obtained from licensed dealers who have complied with the environmental management guidelines and policies and approved by Kenya Bureau of Standards (KBS). Ultimately, priority will be given to materials and technology that are both cost and time effective.

ii. Several machines shall be used which will include earth moving equipment (excavators, loaders, wheel loading shovels and backhoes), material handling equipment (cranes and hoists), construction equipment (concrete mixers and vibrators) and Engineering vehicles (trailers, tippers and dumpers).

iii. The project will require a labour force of both skilled and non-skilled workers. The skilled personnel will include the project consultants (architects, engineers, quantity surveyors and environmental experts) and the contractor with a team of foreman, masons,
plasterers, carpenters, plumbers, welders, electricians, glaziers, painters and casual labourers.

iv. Other construction inputs will include water and electricity from the main grid or provided by generators

2.6 Construction Activities

2.6.1 Pre-construction phase

i. Seeking of the appropriate approvals from the relevant authorities such as borehole drilling, excavation, public health, WRA, waste disposal sites and tree cutting permits from the various relevant agencies.

ii. Preparation of the preliminary architectural and structural designs for the proposed project and submission to the Nairobi City County Government for approval.

iii. Conducting a preliminary geotechnical exploration investigation for the project.

iv. Appraisal of baseline conditions to determine supply and demand for required infrastructural services.

v. Provision of sanitary facilities within the site to be used by construction workers, utilities such as offices, material storage areas and construction machinery parking areas.

vi. Preparing an ESIA report and submission to NEMA for review and licensing.

2.6.2 Construction phase

i. Excavation and Foundation Works

Excavation will be carried out to prepare the site for construction of foundations, pavements and drainage systems. This will involve the use of heavy earthmoving machinery such as excavators, tractors and bulldozers.

ii. Masonry, Concrete Work and Related Activities

The construction of the foundations, building walls, floors, pavements, drainage systems and parking area among other components of the project will involve a lot of masonry work and related activities. General masonry and related activities will include construction of foundations, superstructure construction, plastering and erection of building walls and curing of fresh concrete surfaces. These activities are known to be labor intensive and will be supplemented by machinery such as concrete mixers.
iii. Structural Steel Works
The building will be reinforced with structural steel for structural stability. Structural steel works will involve steel cutting, welding and fixing.

iv. Electrical and Mechanical Works
Electrical and mechanical works shall be done by qualified technicians under the supervision of the Project Engineer and shall follow the set standards. Activities will include installation of electrical fixtures, devices and appliances including electrical cables, lighting apparatus, sockets etc. In addition, there will be other activities involving the use of electricity such as welding and metal cutting.

The mechanical works will include and not limited to the following:
  i. Plumbing and drainage
  ii. Service ducts accessible from all floor levels
  iii. Soil vent pipes (SVP) provided on doors and windows
  iv. Storm drains pipes
  v. Inspection chamber covers and framing
  vi. Underground foul and waste drain pipes

vii. Landscaping
Once construction ceases, there will be greening and landscaping programmes aimed at improving the aesthetic value and visual quality of the site. 18% of the total plot area has been set aside for open green spaces among them lush grass lawns, planters and gardens.

2.6.3 Operational phase
Upon completion of construction phase, the next phase shall be operation phase which shall involve the following:-
  i. Residence: A total of 1,370 families will reside within the proposed development. Several family activities such as cooking and washing will thus accompany residence.
  ii. Retail spaces: Some activities will include social interaction and entertainment in the coffee shops and meetings in small groups. The retail spaces will bring services closer to people living in the neighborhood.
  iii. Recreational Activities: There will be several recreational activities within the proposed development aided by the presence of the social hall, the public green spaces and walk ways. These shall include jogging, playing and socializing.
iv. **Educational activities:** The plot houses a kindergarten, which shall be utilized by children of school going age. Learning and playing shall consist the main activities.

v. **Property Management:** There shall be a provision for a management committee made of elected residents to oversee the day to day operations of the development. This committee will liaise with a waste collection company and negotiate charges for such services. The same committee will come up with rules for the compound. Such may include, no public vehicles getting to the compound to pick children going to school, or, designate a point of pick up and drop off, among other duties

### 2.6.4 Decommissioning Activities

Decommissioning is an important phase in the project cycle and comes last to wind up the operational activities of a particular project. It refers to the final disposal of the project and associated materials at the expiry of the project lifespan. If such a stage is reached, the proponent needs to remove all materials resulting from the demolition/decommissioning from the site. The following should be undertaken to restore the environment:

i. Providing evacuation notices to residents notifying them of intention to demolish

ii. Obtaining the demolition and waste disposal permits from Nairobi City County.

iii. Dismantling of all equipment including electrical and mechanical installations-Be clear (Notices, permits, removal of facilities)

iv. Remove all underground facilities from the site

v. The site should be well landscaped by flattening the mounds of soil

vi. Planting vegetation which may include indigenous trees and flowers

vii. Fence and signpost unsafe areas until natural stabilization occurs

viii. Backfill surface openings

### 2.7 Construction Products, By Products and Wastes

#### 2.7.1 Products

The final product will be **1370 housing units, 1048 parking bays, a social hall, a kindergarten, retail spaces** and other auxiliary facilities.

#### 2.7.2 By-Products

The by-products will be disposed-off as follows:
i. The soil generated during excavation will be reused elsewhere in the project. Unusable soil will be transported for disposal by a NEMA licensed waste handlers after obtaining waste disposal permits at designated dumping sites authorized by NCC.

ii. Large pieces of timber/wood generated during the construction phase will be transported back to the contractor’s yard for reuse in future while the small pieces of timber/wood will be disposed-off for use as fuel for cooking and heating.

iii. Empty cans and drums will be used to store water during construction. The damaged ones will be disposed-off to registered scrap metal and plastic waste dealers.

2.7.3 Wastes
The solid waste generated during construction will include construction debris, sanitary waste, excavated soil and rocks. The other wastes that are likely to be generated during operation are solid waste such as paper, plastics, cans, glasses, metallic pieces, organic waste and E-wastes. The liquid waste generated throughout the project cycle will be conveyed to the trunk sewer system. These wastes will be disposed by the proponent in accordance with the standards and documented procedures stipulated in the EMCA Waste Management Regulations of 2006.

2.8 Project Budget and Duration
The proposed project is estimated to cost Four billion, nine hundred eighty six million, nine hundred eight thousand, one hundred and ninety two Kenyan shillings (Ksh. 4,986,908,192.00). The project implementation works is estimated to take 2 years to completion.
CHAPTER THREE: BASELINE INFORMATION

3.1 Physical environment

3.1.1 Climate
Park road area just like many parts in Nairobi experiences a fairly cool climate resulting from its high altitude. Temperature ranges from a low of 10°C to a high of 29°C. It has a bi-modal rainfall pattern. The long rains season fall between March and May with a mean rainfall of 899 millimeters (mm) while the short rains season fall between October and December with a mean rainfall of 638 mm. The mean annual rainfall is 786.5 mm (Nairobi County Integrated Development Plan, 2014).

3.1.2 Topography and drainage
The site lies at an altitude of about 1700m above sea-level and is fairly flat in its topography. It drains its storm water through natural infiltration due to the presence of permeable soils on the site.

Plate 3.1: Project Site

Source: Field survey, 27/02/2019
3.1.3 Geology and soils
The geology history of Nairobi has been dominated by volcanic activity whereby a thick succession of alkaline lavas and associated tuffs began accumulating in Mid-Miocene time and continued into the upper Pleistocene. The soils types in the project area are primarily black cotton which need to be excavated before construction begins and disposed by private waste collectors authorized by Nairobi City County and licensed by the National Environment Management Authority to offer the services.

The developer has carried out a geo-technical survey to establish the soil’s carrying capacity as well as the minimum foundation depth putting into consideration the findings of the survey into the designs.

3.1.4 Hydrology
There is no river or stream bordering the property. The closest water body is Nairobi River which is about 750 m south of the site. The activities of the proposed development will have no direct impact on the status of the river. The land is not part of any wetland.

The proponent has commenced the process of drilling a borehole to supplement the existing water supply after obtaining the necessary permits. This shall be done in conformity with the laid out laws and regulations governing underground water. A hydrological survey shall be conducted to determine the viability of the borehole, its capacity and quality of water.

3.2 Biological environment
3.2.1 Flora
At the time of our site visit, there was no form of vegetation on site. The site had already been levelled to pave way for the proposed development. It is envisaged that appropriate landscaping and greening measures shall be undertaken to enhance the vegetation cover and greening on the site upon completion of the project for biodiversity and environmental conservation. Furthermore, 18% of the total plot area has been set aside for the same.

3.2.2 Fauna
The project site is situated within a commercial/residential zone where human activities have altered the natural habitat of animals over the years. There was no physical evidence of fauna life at the time of the visit to the site. The conservation of trees and re-vegetation once the construction activities are completed are measures which will be carried out to preserve the ecosystem.
3.3 Socio-Economic environment

The site is served with good road network, communication services and is at the proximity of the City centre which has most commercial, services i.e. Offices, open market, supermarkets and large shops. Besides, there are a number of informal business activities such as Jua Kali artisans making household goods, matatu and bus transportation services.

3.3.1 Land Use

The neighborhood is generally characterized by a mix of different uses. However, the dominant land use is high density residential characterized by 4-8 floor apartments. Initially, the area developments had been maintained at medium levels with most buildings having less than four (4) floors. However, the trend appears to be changing, perhaps due to the pressure to provide more housing units within the area. This has seen developers put up high density residential units with more number of floors and units.

Other land uses in the area include; commercial in form of corner shops, market stalls; educational facilities such as Ummul Q’ura and Muslim academy, which are located within close proximity to the site and health facilities such as Guru Nanak Hospital.

Figure 3.1: Abutting land uses

Source: Field Survey, 27/02/2019
3.3.2 Educational institutions

Due to the increasing population, the area has seen an increasing number of educational institutions. The different education facilities found in the area include Jara Kindergarten, Muslim Academy, Ummul Qura Educational Centre, Racecourse Primary School and Juja Road Primary School and Secondary Schools such as Guru Nanak Secondary School and Pangani Girls’ School and colleges such as Nairobi Technical Training Institute (NTTI). These institutions will serve the residents of the new development.

3.3.3 Religious institutions

Park Road Mosque which borders the site to the North West, will be beneficial to the Muslim community on site. Other religious institutions in the neighborhood include churches such as Kariokor Methodist Church, Prayers Beyond Boundaries Ministries and The Salvation Army, and temples which will serve the residents of the area.

3.3.4 Commercial Activities

These activities are concentrated along Park Road, Ngara and Eastleigh areas. They mainly include shopping malls in Eastleigh such as Tansim Shopping mall and Olympic Shopping Centre and office suites such as Aqua Office suites, open markets in Ngara and Eastleigh area. Other commercial activities include banks such as Equity Bank, Family Bank and KCB Bank and light industry (petrol stations) such as the Shell Filling Station and Oil Libya Petrol Station.

3.3.5 Security

Security in the area is provided by the nearby Pangani Police Station which is located approximately 500m from the site. The entire site already has an existing perimeter wall and one gate which is fully manned by guards 24 hours. The proponent intends to install CCTV cameras at strategic points to beef up the security of the area. To ensure security and tranquility is maintained within the development, community policing shall be encouraged e.g. the ‘Nyumba Kumi Initiative’ so that all the residents stay vigilant on their safety and well-being. The security item will also be part of the activities undertaken by the facility management organization.

3.3.6 Health Institutions

The major health institutions serving the residents in the region are Pumwani Hospital, Guru Nanak Hospital, Iran Medical Clinic, Taiba Dental Clinic and Gertrudes Children’s Hospital located within a 1 Km radius.
3.4 Infrastructure and services

3.4.1 Roads and accessibility

The property is accessed via two roads; Kinsasha road, which is 15 metres wide and Muslim road which is 12 metres wide and border the site to the North and South respectively. They will connect the site to Park road, which will eventually link it to various parts of the city. Both roads are tarmac and in good condition. The accessibility of the site will be instrumental during project implementation process and occupation phase.

Plate 3.2: Immediate access routes to the site (Muslim Road and Kinsasha Road)

Source: Field Survey 27/02/2019

3.4.2 Water Supply

The general area as well the site is served with water supplied by Nairobi City Water and Sewerage Company (NCWSC). The proposed development will be connected to the same source upon necessary applications and payment of connection fees to NCWSC. The proponent has commenced the process of drilling a borehole on site to provide an alternative source of water. Rainwater harvesting techniques have also been incorporated in the design.
3.4.3 Sewer System
The general area is served by sewerage from NCWSC and the developer intends to connect to the main trunk sewerage system upon acquisition of the necessary permits. The internal sewer system of the proposed project will be suitably designed to collect all effluent / waste water from the development into the trunk sewer. All sanitary works will be done to the entire satisfaction of the County and Ministry of Health, Public Health Office.

3.4.4 Storm Water drainage
The surface water/run-off in the area is normally drained into the open drains located along Muslim Road. Storm water and surface run off from the site will be drained using these drains. In line with the above, surface drainage systems will effectively be designed and installed to manage the storm water as advised by the project civil engineer.

3.4.5 Solid Waste Management
The solid waste within the area is managed either by the County Government or the private contractors authorized by NCC and licensed by NEMA to collect the wastes on a weekly basis. The proposed development will have a private arrangement for waste collection and transportation. Waste segregation and recycle will be encouraged where feasible and only transport that which cannot be reused/recycled to designated disposal areas.

3.4.6 Energy
Construction machinery will require fuels (petroleum) during construction phase. Energy will also be needed during occupation phase. The general area and the proposed site in specific are supplied with electricity from the national grid. The proposed development will be extended to the same supplier after construction. In addition to the above, the need for energy conservation will be emphasized during construction and occupation phases. During occupation phase, the use of energy conserving appliances (i.e. LED bulbs) and renewable energy sources such as solar energy has been incorporated in the building design.
3.4.7 Information Communication Technology

The area is well covered by communication facilities such as Telkom, Safaricom, Airtel among others. There exist fiber connections in the neighborhood and the same will be connected to the development upon completion of construction works. All these will facilitate communication during the project cycle.

Source: Field survey, 27/02/2019
CHAPTER FOUR: POLICY, LEGAL AND INSTITUTIONAL FRAMEWORK-

4.1 Introduction

EIA is an instrument for environmental management and development control. It is now accepted that development projects must be economically viable, socially acceptable and environmentally sound. It is a condition that all developers conduct EIAs on the development projects.

EIAs are carried out in order to identify potential positive and negative impacts associated with the proposed development with a view of taking advantage of the positive impacts and developing mitigation measures for the negative ones. The guidelines on EIAs are contained in section 58 to 67 of the Act. According to section 68 of the EMCA CAP 387, the authority shall be responsible for carrying out environmental audits on all activities that are likely to have a significant effect on the environment.

There are a number of policies, laws and regulations that govern the protection, conservation and exploitation of the natural resources coupled with provisions for environmental management. These national policies, laws and regulations cover infrastructure, water, agriculture, forestry and health just to mention a few. The national environment action plan documents cover policy directions regarding integration of environmental concerns including EIA into development planning process.

Some of the key national laws, policies and regulations that govern the management of environmental resources in the country are discussed herein.

4.2 Relevant National Policies

The following national policies are of relevance to the proposed project:

4.2.1 The National Environmental Action Plan (NEAP)

The NEAP was a deliberate policy effort to integrate environmental considerations into the country’s economic and social development initiatives/plans. The integration process was to be achieved through a multi-sectoral approach to develop a comprehensive framework to ensure that environmental management and conservation of natural resources are an integral part of societal decision making. As a result of its adoption and implementation, establishment of appropriate policies and legal guidelines as well as harmonization of the existing ones have been accomplished and/or are in the process of development. Under the NEAP process, EIAs were
introduced targeting the industrialists, business community and local authorities (now the county governments).

*The project shall be implemented and operated based on these guidelines*

**4.2.2 National Policy on Water Resources Management and Development (1999)**

While the National Policy on water resources management and development (1999) enhances a systematic development of water facilities in all sectors for promotion of the country’s socio-economic progress, it also recognizes the by-products of this process as wastewater. It therefore calls for development of appropriate sanitation systems to protect people’s health and water resources from institutional pollution. The same policy also requires that such projects undergo comprehensive EIAs that will provide suitable measures to be taken to ensure environmental resources and people’s health in the immediate neighborhood and further downstream are not negatively impacted by the emissions.

**4.2.3 Sustainable Development Goals (SDG’s)**

On September 25th 2015, countries adopted the United Nations Sustainable Development Goals (SDG’s) aimed at contributing towards ending poverty, protecting the planet, and ensuring prosperity for all as part of a new sustainable development agenda. The SDG’s have very significant implications for investment needs and the role of the public sector is fundamental and pivotal. At the same time the contribution of the private sector is indispensable.

The proponent has committed to the SDG’s through the proposed development in the following ways:

**Goal 8 – Decent work and economic growth**

Targets achieved:

i. Achieve higher levels of economic productivity through diversification, technological upgrading and innovation, including through a focus on high-value added and labor-intensive sectors by providing conducive working environment.

ii. Employment creation that will contribute to reducing the proportion of youth not in employment.

iii. Providing an environment that emphasizes on protection of labor rights and promotes safe and secure working environments for all workers

**Goal 11 – Sustainable cities and communities**

Targets achieved:
i. Enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management in all countries

**Goal 7 - Affordable and Clean Energy**

Targets achieved:

i. Implementation of an energy management system shall contribute to increased energy efficiency.

### 4.3 Legal framework

#### 4.3.1 The Constitution of Kenya 2010

The Constitution of Kenya is the supreme law of the Republic of Kenya and binds all persons and all State organs at all levels of government. It provides the broad framework regulating all existence and development aspects of interest to the people of Kenya, and along which all national and sectorial legislative documents are drawn. In relation to environment, Article 42 of Chapter 4, the Bill of Rights, confers to every person the right to a clean and healthy environment, which includes the right to have the environment protected for the benefit of present and future generations through legislative measures, particularly those contemplated in Article 69, and to have obligations relating to the environment fulfilled under Article 70. Chapter 5 of the new constitution provides the main pillars on which the 77 environmental statutes are hinged and covers "Land and Environment" and includes the aforementioned articles 69 and 70. Part 1 of the Chapter dwells on land, outlining the principles informing land policy, land classification as well as land use and property. Part 2 of the Chapter directs focus on the environment and natural resources. It provides for a clear outline of the state’s obligation with respect to the environment. The Chapter seeks to eliminate processes & activities likely to endanger the environment.

There are further provisions on enforcement of environmental rights as well as establishment of legislation relating to the environment in accordance to the guidelines provided in this Chapter. In conformity with the Constitution of Kenya 2010, every activity or project undertaken within the Republic of Kenya must be in tandem with the state’s vision for the national environment as well as adherence to the right of every individual to a clean and healthy environment. The proposed development project is a development activity that will utilize sensitive components of the physical and natural resources hence need for a clearly spelt out environmental management plan to curb probable adverse effects to the environment.
The proponent will therefore adhere to the provisions of the Environmental and Social Management and Monitoring Plan provided in this report to ensure the occupants and general public’s right to a clean and safe environment is not infringed.

4.3.2 Environment Management and Coordination Act, EMCA, Cap 387.

In EMCA states in section 3 (1) and (2) that “Every person in Kenya is entitled to a clean and healthy environment and has the duty to safeguard and enhance the environment and that the entitlement to a clean and healthy environment under subsection (1) includes the access by any person in Kenya to the various public elements or segments of the environment for recreational, educational, health, spiritual and cultural purposes.

Part VI Section 58 (2) of the Act states the proponent of any project specified in the Second Schedule shall undertake a full environmental impact assessment study and submit an EIA Study report to the Authority prior to being issued with the EIA license. Section 58 (5) states that EIA studies and reports required under the Act shall be conducted or prepared respectively by individual experts or a firm of experts authorized in that behalf by the Authority. The Authority shall maintain a register of all individual experts or firms of all experts duly authorized by it to conduct or prepare environmental impact assessment studies and reports respectively. The register shall be a public document and may be inspected at reasonable hours by any person on the payment of a prescribed fee. Subsection (7) further states that EIA shall be conducted in accordance with the EIA regulations, guidelines and procedures issued under this Act.

Section 59 (1) states that upon receipt of an EIA study report from any proponent under section 58(2), the Authority shall cause to be published in the Gazette, in at least two newspapers circulating in the area or proposed area of the project and over radio stating:

(a) a summary description of the project;
(b) the place where the project is to be carried out;
(c) the place where the environmental impact assessment study, evaluation or review report may be inspected; and
(d) a time limit of not exceeding ninety days for the submission of oral or written comments by any member of the public on the environmental impact assessment study, evaluation or review report.

Subsection (2) and (3) of 59 states that the Authority may, on application by any person extend the period stipulated in sub-paragraph (d) so as to afford reasonable opportunity for such person...
to submit oral or written comments on the EIA report and the Authority shall ensure that its website contains a summary of the report referred to in subsection (1).

_The proponent has engaged the services of the environmental experts to conduct the ESIA Study Report in line with the provisions of this Act. The environmental experts conducted the ESIA in line with the regulations, guidelines and procedures issued under the Act._

**4.3.3 The Environmental (Impact Assessment and Audit) Regulations, 2003**

These regulations stipulate how an EIA study report should be prepared and specifies all the requirements that must be complied with. It highlights the stages to be followed, information to be made available, role of every stakeholder and rules to be observed during the EIA Study Report making process.

Section 4 (1) states that no proponent shall implement a project likely to have a negative environmental impact or for which an EIA is required under the Act or these Regulations unless an EIA has been concluded and approved in accordance with these Regulations.

Section 11 (1) states that an EIA study shall be conducted in accordance with terms of reference developed during the scoping exercise by the proponent and approved by the Authority. Section 13 (1) and (2) further states that proponent shall, on the approval of the terms of reference under regulation 11, submit to the Authority the names and qualifications of the impact assessment experts appointed to undertake the EIA study and authorized so to do in accordance with section 58 (5) of the Act and that every EIA study shall be carried out by a lead expert qualified in accordance with the criteria of listing of experts specified in the Fourth Schedule to these Regulations.

Section 17 (1) stipulates that during the process of conducting an EIA study under these Regulations, the proponent shall in consultation with the Authority, seek the views of persons who may be affected by the project.

Part IV of the regulations states how an EIA Study Report is conducted, contents and information required, submission, timelines and review process.

_The proponent and consultant have undertaken this ESIA Study report in line with all the provisions set out in these regulations. A public meeting, administration of questionnaires and interview were conducted to seek views of persons who may be affected by the project in line with these regulations._
4.3.4 Environmental Management and Co-ordination (Water Quality) Regulations, 2006

The Regulations apply to drinking water, water used for industrial purposes, water used for agricultural purposes, water used for recreational purposes, water used for fisheries and wildlife, and water used for any other purposes.

Part II Section 4 (1) states that “Every person shall refrain from any act which directly or indirectly causes, or may cause immediate or subsequent water pollution, and it shall be immaterial whether or not the water resource was polluted before the enactment of the Act. Subsection (2) further states that “No person shall throw or cause to flow into or near a water resource any liquid, solid or gaseous substance or deposit”

Part IV Section 24 states that “No person shall discharge or apply any poison, toxic, noxious or obstructing matter, radioactive wastes, or other pollutants or permit any person to dump any such matter into water meant for fisheries, wildlife, recreational purposes or any other uses”.

According to these regulations, “Every person shall refrain from any action which directly or indirectly causes, or may cause immediate or subsequent water pollution, and it shall be immaterial whether or not the water resource was polluted before the enactment of the Act”.

All waste water shall be channeled to the sewer line so as not to pollute the ground and surface water and if a pollution incidence occurs the contractor/proponent shall notify the authority immediately.

4.3.5 Environmental Management and Co-ordination (Waste Management) Regulations, 2006

The regulations are contained in the Kenya Gazette No. 69, Legal Notice No. 121. Section 4 (1) states that “No person shall dispose of any waste on a public highway, street, road, recreational area or any other public place except in a designated waste receptacle”.

Section 4 (1) and (2) states that “No person shall dispose any waste on a public highway, street, road, recreational area or in any public place except in a designated waste receptacle and that any person whose activities generate waste shall collect, segregate and dispose or cause to be disposed of such waste in the manner provided for under these Regulations”

Section 6 (1) stipulates that “Any person who owns or controls a facility or premises which generates waste shall minimize the waste generated by adopting the following cleaner production principles:
i. improvement of production process through conserving raw materials and energy, eliminating the use of toxic raw materials within such time as may be prescribed by the Authority and reducing toxic emissions and wastes,

ii. monitoring the product cycle from beginning to end by identifying and eliminating potential negative impacts of the product, enabling the recovery and re-use of the product where possible and reclamation and recycling,

iii. Incorporating environmental concerns in the design, process and disposal of a product.

Section 9 states that “Any person licensed to transport waste shall collect waste from the designated area of operations or storage areas and shall deliver such waste to the designated storage site, disposal site or plant”

*The proponent shall engage the services of a licensed waste handler to collect, transport and dispose of wastes to the designated areas.*

### 4.3.6 The Environmental Management and Coordination (Noise and Excessive Vibration Pollution) (Control) Regulations, 2009

Section 3 (1) and (2) of the regulations states that no person shall make or cause to be made any loud, unreasonable, unnecessary or unusual noise which annoys, disturbs, injures or endangers the comfort, repose, health or safety of others and the environment except as otherwise provided in the Regulations. In determining whether noise is loud, unreasonable, unnecessary or unusual, the following factors may be considered:

- Time of the day;
- Proximity to residential area;
- Whether the noise is recurrent, intermittent or constant;
- The level and intensity of the noise;
- Whether the noise has been enhanced in level or range by any type of electronic or mechanical means; and,
- Whether the noise can be controlled without much effort or expense to the person making the noise.

These regulations also relate noise to its vibration effects and seek to ensure no harmful vibrations are caused by controlling the level of noise.

Part II Section 4 states that: except as otherwise provided in these Regulations, no person shall
a. Make or cause to be made excessive vibrations annoys, disturbs, injures or endangers the comfort, response, health or safety of others and the environment; or
b. Cause to be made excessive vibrations which exceed 0.5 centimeters per second beyond any source property boundary or 30 meters from any moving source.

Section 13 (1) states that no person shall operate construction equipment (including but not limited to any pile driver, steam shovel, pneumatic hammer, derrick or steam or electric hoist) or perform any outside construction or repair work so as to emit noise in excess of the permissible levels as set out in the Second Schedule to these Regulations except for the purposes in sub-Regulation (2) hereunder. These purposes include emergencies, those of domestic nature and/or public utility construction.

Section 14 relates to noise, excessive vibrations from construction, demolition, mining or quarrying site, and state that: where defined work of construction, demolition, mining or quarrying is to be carried out in an area, the Authority may impose on how the work is to be carried out including but not limited to requirements regarding a) machinery that may be used, and b) the permitted levels of noise as stipulated in the Second and Third Schedules to these Regulations.

The contractor shall ensure that all construction activities are carried out between 0800hrs and 1800hrs on weekdays to ensure that the neighbors are not disturbed. The contractor shall also ensure that all machineries are in good working condition to reduce noise.

4.3.7 The Environmental Management and Co-Ordination (Air Quality) Regulations, 2014

The objective of these Regulations is to provide for the prevention, control and abatement of air pollution to ensure clean and healthy ambient air. Section 5 states that no person shall act in a way that directly or indirectly causes, or is likely to cause immediate or subsequent air pollution; or emit any liquid, solid or gaseous substance or deposit any such substance in levels exceeding those set out in the first Schedule.

Further, clause 6 stipulates that no person shall cause or allow emission of the priority air pollutants prescribed in the second schedule to cause the ambient air quality limits prescribed in the first schedule to be exceeded.

Clause 25 (1) states that no person shall cause or allow the emission of visible air pollutants from a stationary or mobile vehicle in excess of the limits set out under the prescribed Standard.
Clause 33 states that no person operating construction equipment or handling construction material shall allow emission of particulate matter so as to adversely affect the limits set out in the First schedule.

Clause 35 states that no person shall cause or allow stockpiling or other storage of material in a manner likely to cause ambient air quality levels set out under the First Schedule to be exceeded.

Clause 38 stipulates that no person shall cause or allow emissions of priority air pollutants set out under the Second Schedule from disposal of medical waste, domestic waste, plastics, tyres, industrial waste or other waste by open burning.

*The proponent shall comply with these regulations and implement all mitigation measures provided in the ESMMP to prevent air pollution during the project cycle*

### 4.3.8 The Water Act, 2016

This Act of Parliament provides for the regulation, management and development of water resources, water and sewerage services.

Part II section 9 of this Act states that every person has a right to access water resources, whose administration is the function of the national government. Part III section 11 states the establishment of the Water Resources Authority (WRA) whose functions are stipulated in section 12 and include but not limited to receiving water permits applications for water abstraction, collection of water permit fees and water use charges.

Section 63 of the act states that every person in Kenya has the right to clean and safe water in adequate quantities and to reasonable standards of sanitation as stipulated in Article 43 of the Constitution.

Section 143 states that a person shall not, without authority conferred under this Act;

a) willfully obstruct, interfere with, divert or obstruct water from any watercourse or any water resource, or negligently allow any such obstruction, interference, diversion or abstraction; or

b) Throw, convey, cause or permit to be thrown or conveyed, any rubbish, dirt, refuse, effluent, trade waste or other offensive matter or thing into or near to any water resource in such manner as to cause, or be likely to cause, pollution of the water resource.

*The proponent shall ensure that all provisions stated in the act and under any regulations are observed and that the ESMMP is implemented.*
4.3.9 Occupational Health and Safety Act, 2007

This is an act of Parliament to provide for the safety, health and welfare of workers and all persons lawfully present at workplaces, to provide for the establishment of the National Council for Occupational Safety and Health and for connected purposes. The key areas addressed by the Act include:

i. General duties including duties of occupiers, self-employed persons and employees. Enforcement of the act including powers of an occupational safety and health officer.

ii. Health General Provisions including cleanliness, ventilation, lighting and sanitary conveniences.

iii. Machinery safety including safe handling of transmission machinery, hand held and portable power tools, self-acting machines, hoists and lifts, chains, ropes & lifting tackle, cranes and other lifting machines, steam boilers, air receivers, refrigeration plants and compressed air receiver.

iv. Safety General Provisions including safe storage of dangerous liquids, fire safety, evacuation procedures, precautions with respect to explosives or inflammable dust or gas.

v. Chemical safety including the use of material safety data sheets, control of air pollution, noise and vibration, the handling, transportation and disposal of chemicals and other hazardous substances materials

vi. Welfare general provisions including supply of drinking water, washing facilities, and first aid.

The proponent shall ensure that safety measures are implemented in use of tools and machinery within site and that protection of the workers and general public with any form of interaction with the construction sites is given first priority.

4.3.10 The Physical Planning Act of 1996 CAP 286

This Act is aimed at enhancing and promoting the integrated physical development of socioeconomic activities. The act requires that any activity that constitutes development needs to be approved by the relevant local authority. It has made specific provisions in respect to the mandate of local authorities (now County Governments) in development control and planning Part V - Control of development

30. (1) No person shall carry out development within the area of a local authority without a development permission granted by the local authority under section 33.
(2) Any person who contravenes subsection (1) shall be guilty of an offence and shall be liable to a fine not exceeding one hundred thousand shillings or to an imprisonment not exceeding five years or to both.

(3) Any dealing in connection with any development in respect of which an offence is committed under this section shall be null and void and such development shall be discontinued.

(4) Notwithstanding the provisions of subsection (2);

(a) The local authority concerned shall require the developer to restore the land on which such development has taken place to its original condition within a period of not more than ninety days;

(b) If on the expiry of the ninety days’ notice given to the developer such restoration has not been affected, the concerned local authority shall restore the site to its original condition and recover the cost incurred thereto from the developer.

31. Any person requiring development permission shall make an application in the form prescribed in the Fourth Schedule, to the clerk of the local authority responsible for the area in which the land concerned is situated. The application shall be accompanied by such plans and particulars as are necessary to indicate the purposes of the development, and in particular shall show the proposed use and density, and the land which the applicant intends to surrender for;

a. Purposes of principal and secondary means of access to any subdivisions within the area included in the application and to adjoining land;

b. Public purposes consequent upon the proposed development.

36. If in connection with a development application a local authority is of the opinion that proposals for industrial location, dumping sites, sewerage treatment, quarries or any other development activity will have injurious impact on the environment, the applicant shall be required to submit together with the application an environmental impact assessment report.

This Act provides for order in terms of development execution.

*This Act provides for order in terms of development execution. This development should therefore comply with all the provisions of this law including land use zoning requirements.*

**4.3.11 Public Health Act Cap 242**

Part IX section 115 of the Act states that No person shall cause a nuisance or shall suffer to exist on any land or premises owned or occupied by him or of which he is in charge any nuisance or other condition liable to be injurious or dangerous to health.
Section 116 requires that the local authorities (county governments) take all lawful, necessary and reasonably practicable measures for maintaining its district (counties) at all times in clean and sanitary condition, and for preventing the occurrence therein of, or for remedying or causing to be remedied, any nuisance or condition liable to be injurious or dangerous to health, and to take proceedings at law against any person causing or responsible for the continuance of any such nuisance or condition.

Part XII Section 136 states that all collections of water, sewage, rubbish, refuse and fluids which permits or facilitate the breeding or multiplication of pests shall be termed nuisances and are liable to be dealt with in the manner provided by this Act. Section 138 states that no person shall within a township permit any premises or lands owned or occupied by him or over which he has control to become overgrown with bush or long grass of such a nature as, in the opinion of the medical officer of health, to be likely to harbour mosquitoes.

*The proponent shall contract a licensed waste handler to collect all waste from the site to disposal at approved dumping site. Sewage from the site shall be channeled to the conventional trunk sewer system.*

**4.3.12 County Government Act, 2012**

The main purpose of the enactment of this Act was to give effect to Chapter Eleven of the Constitution; to provide for county governments' powers, functions and responsibilities to deliver services and for connected purposes. Functions which were carried out by local governments were effectively transferred to the county governments. The Act gives county the responsibility of planning and co-coordinating all developments within their areas of jurisdiction. Part XI (sections 102-115) of the Act provides for planning principles and responsibilities of the county governments. The land use and building plans provided for in the Act are binding on all public entities and private citizens operating within the particular county. The proposed project is within the Nairobi City Government and thus there will be need of working in liaison with the County Government. The plans for the proposed project must be approved by the County Government and the County government may also issue directives and authorizations on various aspects e.g. waste management and fire emergency preparedness among others.

*The proponent shall work in liaison with County Government and in particular the Water, Energy, Environment and Natural Resources Sector.*
4.3.13 Energy Act, Cap 314.
The Energy Act, 2006 was enacted on 2nd January 2007 establishes an Energy Regulatory Commission (ERC) mandated to perform all function that pertains to energy production, transmission, setting and enforcing of energy policies, Public education and enforcing energy conservation strategies, prescribing the energy licensing process and issuing of licenses that pertain to energy sector in Kenya. Section 30 of the Act provides the factors that shall be taken into consideration prior to issuance of license. It states the need and expression of an entity to conserve and protect the environment and natural resources in accordance to the EMCA 1999. Moreover, the Act gives provisions for the need to protect health and safety of users of energy by providing an enabling environment of operation that protects the health and safety of users of the service for which the license or permit is required and other members of the public affected by the undertaking.

The proponent will be required to abide by these provisions when installing the water heating solar panels.

4.3.14 National Construction Authority Act, 2011
The act is set to streamline, overhaul and regulate the construction industry in Kenya for sustainable development. The NCA establishes the authority and confers on its power to register contactors within the construction industry. The act requires all the contractors, both foreign and local contractors to be registered with the authority. The act also regulates the practices of foreign contractor by limiting their work to only tender work. The foreign contractors are licensed for only a specific period and once they certify they are in Kenya for that specific time. The foreign contractors must also produce a certificate of compliance. Furthermore they must lodge an affidavit with the NCA that once the project they have been licensed is over, they shall wind up their business. This prevents them from engaging in any other construction in the country.

4.3.15 Building Code, 2000
This gives general guidelines for the construction of buildings and attendant safety measures such as installation of firefighting appliances, fire escapes etc. It equally recognizes local authorities as lead planning agencies and thus requires every developer to submit building plans to the relevant local authority for approval. The local authorities are in turn empowered to disapprove any plan submitted if it is not correctly drawn or does not provide sufficient
information that complies with the relevant by-laws. Any developer who intends to erect a building, such as a retail and office block, must also give the concerned local authority a notice of inspection before the erection of the proposed structure.

After erecting the building, a notice of completion shall be issued to the local authority to facilitate final inspection/approval. No person shall therefore occupy a building whose certificate of completion has not been issued by the local authority. As a precaution against fire breakout, the by-law states that the walls of any premise shall be non-combustible throughout. Similarly, in every building which comprises more than one story, other than a small house, shall have fire resistance.

Section 214 indicates that, in any public building whose floor is more than 20 feet above the ground level, the council may recommend the provision of firefighting equipment that may include one or more of the following: hydrants, hose reels and fire appliances, external conations, portable fire appliances, water storage tanks, dry risers, sprinkler, drencher and water spray spring protector system.

4.3.16 The Penal Code CAP 63

Chapter XVII on “Nuisances and offences against health and convenience” contained in the penal code strictly prohibits the release of foul air into the environment which affects the health of the persons. It states “Any person who voluntarily vitiates the atmosphere in any place so as to make it noxious to the health of persons in general dwelling or carrying on business in the neighborhood or passing along a public way is guilty of a misdemeanor”

Waste disposal and other project related activities shall be carried out in such a manner as to conform to the provisions of this code.

4.3.17 Land Registration Act, 2012

According to section 26 subsection (1) states that the certificate of title issued by the Registrar upon registration, or to a purchaser of land upon a transfer or transmission by the proprietor shall be taken by all courts as prima facie evidence that the person named as proprietor of the land is the absolute and indefeasible owner, subject to the encumbrances, easements, restrictions and conditions contained or endorsed in the certificate, and the title of that proprietor shall not be subject to challenge, except on the ground of fraud or misrepresentation to which the person is proved to be a party; or where the certificate of title has been acquired illegally, unprocedurally or through a corrupt scheme. A certified copy of any registered instrument, signed by the
Registrar and sealed with the Seal of the Registrar, shall be received in evidence in the same manner as the original.

*Copy of land ownership documents is attached to this Report.*

**4.3.18 The National Land Commission Act, 2012 (No. 5 of 2012)**

Section 5 of the Act outlines the Functions of the Commission, pursuant to Article 67(2) of the Constitution as follows 5(1): (a) to manage public land on behalf of the national and county governments; (b) to recommend a national land policy to the national government; (c) to advise the national government on a comprehensive programme for the registration of title in land throughout Kenya; (d) to conduct research related to land and the use of natural resources, and make recommendations to appropriate authorities; (e) to initiate investigations, on its own initiative or on a complaint, into present or historical land injustices, and recommend appropriate redress; (f) to encourage the application of traditional dispute resolution mechanisms in land conflicts; (g) to assess tax on land and premiums on immovable property in any area designated by law; and (h) to monitor and have oversight responsibilities over land use planning throughout the country.

**4.4 Institutional Framework**

**4.4.1 National Environment Management Authority (NEMA)**

The objective and purpose for which NEMA is established is to exercise general supervision and co-ordinate over all matters relating to the environment and to be the principal instrument of the government in the implementation of all policies relating to the environment. A Director General appointed by the president heads NEMA. The Authority is mandated to co-ordinate the various environmental management activities being undertaken by the lead agencies and promote the integration of environmental considerations into development policies, plan, programmes and projects with a view to ensuring the proper management and rational utilization of the environmental resources on a sustainable yield basis for the improvement of the quality of human life in Kenya and identify projects and programmes or types of projects and programmes, plans and policies for which environmental audit or environmental monitoring must be conducted under EMCA.

*The ESIA Study report is submitted to the authority for review and licensing. The proponent shall work in liaison with the authority in complying with the provisions of EMCA and any other subsidiary legislation under the Act.*
4.4.2 National Environmental Tribunal (NET)
This tribunal was established under section 125 of EMCA, Cap 387 with the main mandate of giving guidelines on handling of cases related to environmental offences in the Republic of Kenya. If disputes to the proposed project arise, they are supposed to be presented here for hearing and legal direction.
CHAPTER FIVE: IMPACT ASSESSMENT AND MITIGATION MEASURES

5.1 Anticipated Impacts

The anticipated impacts of the proposed project on the environmental elements which may be negative or positive are categorized into four major parameters. The magnitude is described as being major or minor, the duration may be short-term or long term, the extent is evaluated in terms of being specific (localized) or widespread, and the reversibility in terms of being reversible or irreversible. On the basis of information gathered during both the desktop and field study, the potential environmental impacts of the proposed project are as tabulated below:

## 5.2 Positive impacts

Positive impacts that shall be associated with the implementation of the project include and are not limited to the following:
5.2.1 Provision of housing units
The proposed development will provide 1370 decent housing units for many Kenyans living in Nairobi.

5.2.2 Provision of employment opportunities
The proposed project will create employment opportunities for both skilled and semi-skilled workers. During the construction phase, the project will employ a large workforce including; masons, plumbers, electricians among others, cooks among others. For the operation phase, the project will employ a work force that will include cleaners, security guards and caretakers among others.

5.2.3 Provision of market for goods and services
During the construction phase, the project will consume a lot of building materials sourced both locally and in other parts of the region. This will have a positive impact towards the economic status of the supplies and to the national economy through V.A.T rates for goods.

5.2.4 Increase in revenue to the government.
Through payment of relevant taxes, rates, the project will contribute towards the national and local revenue earnings.

5.2.5 Gains in the local economy
The economy of the neighborhood will receive a boost especially during the construction phase due to the activities of the workers; buying food, drink and commodities.

5.2.6 Improved Security
Security will be ensured around the proposed development through distribution of suitable security lights and presence of 24 hour security guards. This will lead to improvement in the general security in the surrounding area.

5.2.7 Land Use Intensification
The development will result to a more economical use of the land without significant environmental degradation. While 55% the plot area has been set aside for residential units and parking, 18 % has been allocated for open green spaces. The area has been zoned for high rise residential units, meaning that the proposed development is in conformity with the zoning regulations. Moreover, there are retail spaces, a kindergarten and a social hall proposed on site that once complete, will serve the entire neighborhood.
5.2.8 Infrastructure expansion
This being a project that will introduce a large population into the area, there is need to provide services and utilities that will serve the people conveniently without depleting the existing ones. The roads, sewer system and water delivery systems will be expand to cater for the demand.

5.3 Negative Impacts
5.3.1 Soil Erosion
The topographical nature of the proposed project site is generally flat. The activities involved in the site preparation such as excavations in order to construct the foundations may have a major negative impact on soil and geology of the project site. Heavy machinery will be traversing the site may lead to soil compaction and erosion.

Potential Mitigation measures
i. Control excavation works especially during rainy / wet conditions
ii. The stockpiling of construction materials shall be properly controlled and managed.
iii. Materials to be delivered on site in installments.
iv. Provide soil erosion control measures i.e. suppressing open surfaces with water or use of soil erosion control structures on soil-erosion prone areas within the site.
v. Avoid unnecessary excavations and other soil disturbances that can predispose it to the agents of erosion.
vi. Avoid unnecessary movement of soil materials from the site.
vii. Re-surface open areas on completion of the project and introduce appropriate vegetation.
viii. Leveling of the project site to reduce run-off velocity and increase infiltration of storm water into the soil
ix. Building of physical barriers to prevent mass movement where necessary

5.3.2 Air Pollution
During the construction phase air quality is expected to decline as a result of an increase in levels of fugitive dust from excavation works, the stockpiled earth materials, dusty roads and concrete mixing. Tiny particulates are a public health hazard and may otherwise create considerable nuisances to the public. There may be air pollution due to combustion of fossil fuels expected from construction machinery and vehicles. This is expected to be a short-term, reversible impact lasting only for the duration of the construction activity.

Potential Mitigation measures
i. Provide personal protective equipment (PPE) such as gas masks, goggles etc. to the workers

ii. Stockpiles of fine materials (e.g. sand and ballast) should be wetted or covered with tarpaulin during windy conditions.

iii. Regular and prompt maintenance of construction machinery and equipment. This minimizes generation of hazardous gases.

iv. Access roads and exposed ground must be water sprayed at a frequency that effectively keeps down the dust.

v. Providing appropriate enclosure for the concrete mixer and use of dust nets or screens at high levels of the building

vi. Regular watering of all the exposed areas to prevent fugitive dust violations.

vii. Minimize exposed areas through the schedule of construction activities to enable dust control

viii. Use environmentally friendly fuels such as low Sulphur diesel

ix. Ensure no burning of waste on sites/non-designated areas

x. Restricting heights from which materials are to be dropped, as far as practicable to minimize the fugitive dust arising from unloading/loading.

xi. Where a vehicle leaving a construction site is carrying a load of dusty materials, the load shall be covered entirely by clean impervious sheeting to ensure that the dusty materials will not leak from the vehicle.

xii. Monitor the air pollution levels regularly as per the Air Quality regulations

5.3.3 Noise and Excessive Vibrations

Construction activities of this nature are agents of noise pollution. The noise is inevitably expected to emanate from vehicular activities, excavations and heavy equipment during construction and building works and this may create a nuisance for nearby occupants, particularly the immediate neighbors. Albeit annoying, this negative impact will be short-term (limited to the construction phase). Noise beyond some level is itself a nuisance and need to be avoided. Such noise emissions should be minimized as much as possible from the source point through appropriate measures.

A number of measures shall be taken by the developer to reduce the impact of noise and excessive vibrations to the neighbors as well as the workers involved in the project. This is
temporary, however, and the aim at this point is to make the exposure to noise to reasonable levels as much as possible until this construction is completed.

Potential Mitigation measures

i. Use of noise suppressors or silencers on noisy equipment or noise shields i.e. corrugated iron sheet structures.

ii. Construction works shall be carried out only during the specified time i.e. from say 0800hrs to 1800 hrs.

iii. Machineries shall be serviced regularly to reduce noise resulting from friction.

iv. Workers should be provided with suitable PPE such as earmuffs when operating noisy machinery and when in noisy environment.

v. Drivers delivering materials shall be advised to avoid unnecessary hooting of the trucks/vehicles.

vi. Provision of a bill board at the construction site/gate notifying of the construction activity and timings.

vii. The contractor shall endeavor to use equipment installed with noise abatement devices as much as practicable.

viii. Safe excavation shall be done using technologies that cause fewer vibrations so as to minimize the effect these excessive vibrations may have on buildings and trees nearby and in case of any inevitable damage to property, the proponent will ensure the affected parties are compensated.

ix. Regular monitoring of noise and vibration levels at the site as per the NEMA regulations.

5.3.4 Oil leaks and spills

Though this may not be common at the site, it is wise to control and observe the little that could occur especially during maintenance of the involved machinery. During operational phase, oil spills might occur at the parking lots.

Potential Mitigation measures

i. All machinery shall be keenly inspected not to leak oils on the ground. This can be ensured through regular maintenance.

ii. Maintenance will be carried out in a well-designed and protected area and where oils/grease is completely restrained from reaching the ground. Such areas should be covered to avoid storm from carrying away spilled oils into the soil/water systems.
iii. All oils/grease and materials will be stored in a site’s store, in the contractor’s yard.

iv. Proper disposal of oil handling materials such as drums, oily clothes/papers/materials and cans.

v. All drainage facilities shall be fitted with adequate functional oil-water separators and silt traps.

5.3.5 Solid Waste

A significant amount of solid waste will be generated in the construction phase through the site clearing process and construction activities which will generate related solid wastes including cement bags, stones, wood, broken glasses, containers, rods of metal, sharp objects (nails) etc. The proponent should take the initiative of segregation of wastes at source to enable recycling and removal of the unrecyclable solid wastes.

The project is expected to generate enormous amounts of solid waste during its operation phase. The bulk of the solid waste generated during this phase will consist of paper, plastic, glass, metal and organic wastes. Such wastes can be injurious to the environment through blockage of drainage systems, choking of water bodies and negative impacts on human health. Some of these waste materials especially the plastic/polythene are not biodegradable thus may cause long term injurious effects to the environment. Even the biodegradable ones such as organic wastes may be injurious to the environment because as they decompose, they produce methane gas, a greenhouse gas known to contribute to global warming.

Potential Mitigation measures

i. Efficient use of building material to reduce waste and recycling where possible

ii. Engage the services of registered waste handlers to transport waste to designated disposal sites

iii. Use of an integrated solid waste management system; through a hierarchy of options: source reduction, recycling, composting and reuse, will facilitate waste handling during occupation phase.

iv. Segregation of waste at the source by providing clearly marked dustbins on each floor of the buildings to ease access.

v. Provision of the waste management rooms as collection point before disposal

vi. To manage waste in line with the Environmental management and coordination (Waste Management) Regulations, 2006.
5.3.6 Liquid Waste

During construction stage it is expected that wastewater shall arise from the construction activities. Contaminated waste water shall be channeled into the sewer line to prevent water and soil pollution.

Lack of or inadequate provision of toilets for use by workers can lead to ad hoc defecation in secluded areas or structures on the site, thus creating unsanitary conditions and sources of fly infestation. This can threaten the health of neighbors and workers themselves. Indiscriminate sewage disposal can also result to contamination of underground water resources.

Wastewater during operational stage if not properly managed can cause contamination of water resources, land and also air pollution. Thus all waste water shall be channeled to the sewer line. It is estimated that the waste water volumes from the development shall be 250,000 Litres.

*Potential Mitigation measures*

i. Channel all liquid waste to the trunk sewer system.

ii. The design of the internal sewerage system shall consider the estimate discharges from individual sources and the cumulative discharge of the entire project i.e. it will have the capacity to consistently handle the loads even during peak volumes.

iii. All drain pipes passing under building, driveway or parking should be of heavy duty PVC pipe tube encased in concrete surround. All manholes on drive ways and parking areas shall have heavy-duty covers set and double sealed airtight; as approved by specialists.

iv. Sanitary facilities will be kept clean always, through regular cleaning.

v. Frequent monitoring of the internal drainage system.

vi. Blockages and damages shall be fixed expeditiously.

vii. Provision of adequate and appropriate sanitary facilities for the workers during construction phase

viii. Ensure regular maintenance of foul water drainage works at the premises to prevent clogging and fore-stall breakdowns

ix. Proper decommissioning of the sanitary facilities shall be carried out once construction is complete

5.3.7 Storm water drainage

The clearance of site vegetation cover and excavation works will lead to increased soil erosion at the project site and release of sediments into the drainage systems. The building roofs and
pavements may lead to increased volume and velocity of storm water or run-off flowing across the area covered by the buildings. This can lead to increased amounts of storm water entering the drainage systems, resulting in overflow and damage to such systems.

**Potential Mitigation measures**

i. Semi permeable materials will be used for construction of pavements.

ii. After completion of construction, the proponent shall embark on comprehensive landscaping.

iii. Drainage channels shall be covered; say with gratings, to avoid occurrence of accidents and entry of dirt.

iv. Construct gently sloping drains to convey water at non-erosive speed.

### 5.3.8 Increased Water demand

A considerable amount of fresh water will be required during the construction works, especially for cement mixing, curing and for wetting of the site to control dust and for use by the workers (washing, drinking etc.). This may place some amount of strain on water supply and may exacerbate current shortage of water supply in Nairobi. During occupation, the demand for water will be very high, since the development is hosting up to 1370 families. This is a large population of people who will require a steady supply of the commodity. The estimated demand for the development is 350,000 Litres per day. Measures have to be taken to ensure a reliable supply of water without affecting the neighboring developments’ supply.

**Potential Mitigation measures**

i. There is a borehole on the site to provide an alternative source of water. A separate EIA should be done for the borehole and hydrological investigations shall be carried out to determine the capacity of the borehole and the quality of water coming from it.

ii. Install water conserving taps that turn-off automatically when water is not in use.

iii. Encourage water reuse/recycling during construction and occupation phases.

iv. Provide notices and information signs to sensitize on means and needs to conserve water resource i.e. ‘Keep/Leave the Tap Closed’, etc. This will awaken the civic consciousness of the workers and occupants with regard to water usage and management

v. Use water efficient appliances and fixtures for plumbing products and white goods

vi. Centralized underground tanks with a capacity of 400,000 Litres and additional holding tanks on the roofs of each block shall be installed.
5.3.9 Occupational Health and Safety (OHS)

During construction, there will be increased dust, air and noise pollution. These are considered harmful to human health. The occupants and workforce involved will be subjected to these environmental hazards putting them at high risk.

Waste material such as pieces of glass and nails left lying on the ground may cause injuries/accidents to the workers. Food for the construction workforce is usually provided by mobile individuals most of which operates without licenses. This can compromise health of the workers especially if such foodstuffs are prepared in unhygienic conditions.

**Potential Mitigation measures**

i. Depending on the occupational safety and health hazards anticipated while performing assigned job tasks, workers will require using properly fitting PPE to avoid injuries and illness. These include working boots, overalls, helmets, goggles, earmuffs, masks, gloves etc

ii. First Aid Kits shall be provided within the site and during construction phase. This should be fully equipped at all times and should be managed by qualified persons.

iii. Adapt a suitable emergency response plans to manage occurrence of anticipated hazards during construction phase.

iv. Safety awareness may be gained through regular safety meetings, safety training or personal interest in safety and health.

v. The contractor shall have workmen’s compensation cover. It will comply with Work Injury and Benefits Act, as well as other ordinances, Regulations and union Agreements.

vi. Sanitary facilities should be provided and maintain standard cleanliness of the facilities.

vii. Local individuals preparing food for the workers at the site should be controlled, monitored and evaluated to ensure that food is hygienically prepared.

viii. Workers should always be sensitized on social issues such as drugs, alcohol, diseases such as HIV/AIDS and STIs etc.

ix. Ensure provision of safe drinking water for the workers on site.

x. Regular monitoring and evaluation of the safety of the site.
5.3.10 Insecurity

Insecurity may arise during the construction phase since intruders may try to steal the building materials deposited on the site. This especially happens in cases where there is no fence but the site for the proposed development already has a perimeter wall security guards manning the entry at all times.

During operation, security should be given paramount priority considering that the people occupying these units are from diverse cultures and do not generally know each other. They should be able to live in tranquility with the assurance that they are safe and their property is safe within and without the site.

Potential Mitigation measures

i. The project site is enclosed using a perimeter wall and there is a guard house at the gate to beef up security of the site.

ii. The guards stationed at the gates will document movements in and out of the site/property

iii. Contractor shall provide adequate security during the construction period when there are no works on the site.

iv. Installation of CCTV cameras at strategic points for monitoring and enhancing the security of the property during operation phase.

v. Encourage community policing among the residents by introducing the “Nyumba Kumi Initiative” to promote a more secure and vigilant community

5.3.11 Fire Occurrence

The operations that lead to fire outbreaks include poor handling of electricity systems, faulty electrical equipment, carelessness etc. These should be avoided both during construction and operation phases of the project through proper training and sensitizations.

Potential Mitigation measures

i. Hire competent and properly authorized electrical contractor to do the wiring and other electrical works

ii. Provide adequate number of appropriate firefighting equipment within each block

iii. Organize for inspection and maintenance of fire equipment at least once in a period of six months

iv. Train and induct the workers on the appropriate use of firefighting equipment
v. Post ‘No smoking signs’ where flammable materials will be stored
vi. Develop and post at the site, fire emergency and evacuation procedures
vii. Train staff on the use of the available firefighting equipment
viii. At least one person trained on handling firefighting techniques should be available through-out the construction phase of the project.
ix. Maintain on site telephone contacts for fire brigade, G4S fire brigade and St. Johns ambulance service provider
x. Designate fire assembly points at the site
xi. Provide fire / emergency exits or alternatives routes of escape in cases of emergencies.

5.3.12 Increased Energy Demand
There will be increased use of energy during the construction stage (fuel for running machinery and other equipment) and during operation phase (electricity used by the occupants of the project). Energy conservation is thus fundamental.

Energy conservation involves optimum use of petroleum products (diesel and gasoline), electrical appliances (equipment), lighting systems and other electric machinery as used for different purposes. It also includes use of renewable energy sources.

Potential Mitigation measures
i. Turn off machinery and equipment when not in use.
ii. Put off all lights immediately when not in use or are not needed.
iii. Use energy conserving lighting and heating systems.
iv. Use of alternative source of energy such as solar power for heating and external lighting.
v. Maximum utilization of natural lighting during the day and in turn preserve the amount of energy used for lighting.

5.3.13 Traffic Density
There will be increase in traffic along the access roads (Kinsasha and Muslim Roads) especially during construction phase since trucks will be accessing the site to deliver construction materials and taking away construction wastes. The site is surrounded by schools and caution should be taken to ensure there are no accidents as children cross the roads to and from school. During the operation phase of the project, a major negative impact on the road network in the area will also be experienced as the volume of traffic associated with the project activities will be significantly increased.
Potential Mitigation measures

i. Employ traffic marshals to control traffic along the adjacent roads and in and out of the site.

ii. It is important that warning/ informative signs be erected at the site. The signs shall be positioned in a way to be easily viewed by the public and mostly motorists.

iii. Enforce a speed limit of 10 km/h for construction vehicles as they use Kinsasha and Muslim Roads.

iv. Entry and exit points shall be provided separately. The entry point is situated along Kinsasha Road and the exit along Muslim Road to ease traffic flow.

v. Provision for NMT lanes within the proposed development

vi. Within the site, a split level parking system shall be adopted to take advantage of the space constraints posed by the project.
CHAPTER SIX: OCCUPATIONAL HEALTH AND SAFETY

6.1 Introduction
Worldwide, construction workers are three times more likely to be killed and twice as likely to be injured as workers in other occupations. In Kenya, though undocumented, it is reported on our dailies that workers are injured or die on construction sites. It is therefore essential that the proponent and contractor ensure the safety and well-being of the workers, the passersby and any other person who may be directly or indirectly associated with the project.

The main hazards and risks of accidents in the construction site can be categorized and described in the following way:

i. risks of slips, trips and falls
ii. risks related to instability
iii. risks related to traffic
iv. risks related to construction machinery
v. risks related to electricity
vi. risks related to gas
vii. fire and explosion risks

After identification of these major risks and the stages when they are likely to occur, efforts should then be focused on how to alleviate these dangers before they happen.

6.2 Principles of OHS
The principles of environmental health and safety involve three main actions:

i. **Risk identification and assessment** - This shall involve identifying the various hazards and risk at the site that have the potential to occur, all the people who may be at risk such as employees, cleaners, visitors, contractors, the public, etc. as well as determine whether a control program is required for a particular hazard.

ii. **Risk communication** – Risk communication refers to the exchange of real-time information, advice and opinions between workers and people facing threats to their health, economic or social well-being. The ultimate purpose of risk communication is to enable people at risk to take informed decisions to protect themselves and their loved ones. Risk communication uses many communications techniques ranging from media and social media communications, mass communications and community engagement. It
requires a sound understanding of people’s perceptions, concerns and beliefs as well as their knowledge and practices.

iii. **Risk management** – This involves actions implementing risk evaluation decisions, monitoring, re-evaluation and prioritizing, and compliance with legal requirements that safeguard health and safety at construction sites. The OHS personnel shall be required to determine if existing control measures are adequate or if more should be done.

### 6.3 Construction Safety, Emergency Procedures and Action Plan

The following recommendations to ensure the health and safety of the workers and general public shall be taken into consideration:

1. Create a culture of safety within construction by planning, creating and supporting ongoing OHS awareness campaigns that promote the importance of workplace occupational health and safety with industry stakeholders as well as consumers.
2. Increase safety knowledge in the construction site by promoting awareness of the top construction sector hazards (trips and falls from heights, motor vehicle incidents, struck by objects, machinery) and how to control these hazards through new and improved information channels.
3. Support the role of the supervisor in creating and maintaining a culture that fosters worker participation in identifying and mitigating workplace hazards.
4. Create a strategy for continuous health and safety learning for the construction workers e.g. by conducting regular training sessions and drills on how to handle emergencies and accidents at site.
5. Identify, review and enhance health and safety content of apprenticeship training standards to keep abreast with any new methods that are effective in promoting site safety.
6. Provide suitable and well maintained Personal Protective Equipment (PPEs) to all the workers and visitors and ensure they are utilized at all times and in the right manner. These include safety boots, helmets, gas masks, gloves and googles.
7. Place visible and readable signs to control the movement of vehicles and notify motorists and pedestrians around the, and workers in the site.
8. Enclose or isolate hazardous parts of machines or sites within the construction site to minimize exposure.

*ESIA Study Report for the Proposed Affordable Housing Development in Park Road Area of Nairobi City County.*
9. Prepare and maintain emergency response equipment such as fire extinguishers and first aid kits in readiness for use when need be.

10. Encourage reporting of safety incidents as soon as they occur at the site, so as to enable a quick action to alleviate the extent of the damage.

11. Comply with the provision of the Occupational Safety and Health Act, (OSHA), 2007

6.4 Grievance Redress System

The proponent shall also develop a Grievance Redress System (GRS) and make it accessible to all stakeholders internal and external. The GRS will always seek to address grievances through legally acceptable methods and as fast as possible whilst not preventing any complainants from seeking other legally acceptable methods to justice. Such a GRS should be made available to staff on recruitment and to members of the public either through government agencies/offices through grievance application forms, and internally by establishing procedures for investigation and quick redress that will be recorded and tracked.

The GRS shall be monitored through indicators of its efficiency and effectiveness of solving the grievance and producing lessons learnt through which corrective actions can be undertaken to improve the project’s health and safety strategies. Additionally as part of monitoring and review all grievances should be reported to the relevant authorities and the corrective actions taken, to ensure the system is credible and transparent. The process should also be culturally appropriate, transparent and non-coercive.
CHAPTER SEVEN: CONSULTATION AND PUBLIC PARTICIPATION

7.1 Introduction

This chapter describes the process of the public consultation conducted to identify the key issues and impacts of the proposed project. The Consultation and Public Participation (CPP) process is a policy requirement by the Government of Kenya and a mandatory procedure as stipulated by EMCA 1999 section 58, on EIA for the purpose of achieving the fundamental principles of sustainable development. Section 17 (1) of the Environmental (Impact Assessment and Audit) Regulations 2003, states that during the process of conducting an environmental impact assessment study under these Regulations, the proponent shall in consultation with the Authority, seek the views of persons who may be affected by the project.

Views from the local residents, stakeholders, surrounding institutions and development partners who in one way or another would be affected or rather interested in the proposed project were sought through administering of questionnaires, interviews and public meeting as stipulated in the Environment Management and Coordination Act, 1999.

7.2 Objectives of the Consultation and Public Participation (CPP)

The objective of the consultation and public participation was to:

i. Disseminate and inform the stakeholders about the project with special reference to its key components and location.

ii. Gather comments, suggestions and concerns of the interested and affected parties.

iii. Incorporate the information collected in the ESIA study.

7.3 Methodology used in the CPP

The exercise was conducted between the 20th February to 6th March 2019. In accordance with the EIA Regulations 2003 section 17 (2) c, appropriate notice was circulated to the affected parties/communities on 27th February, 2019 one week prior to the public meeting (attached is the invitation letter).

The exercise was conducted in different ways, namely;

i. interviews and discussion,

ii. field surveys and observations,

iii. administering of questionnaires,
iv. Public meeting was held on 6th March 2019 (attached is a copy of the minutes and pictures from the forum).

Plate 7.1: Pictures taken during the public meeting

Source: Public meeting 06/03/2019
7.4 Analysis of the Public Consultation findings

7.4.1 Positive Issues
i. Provide accommodation to Kenyans from all walks of life and hence improve national cohesion
ii. Improve the living standards of low and middle income population in the city
iii. Provide job opportunities especially for the youth in the area
iv. Promote trade as there will be a market for goods and services
v. Improved infrastructural utilities such as roads, sewer line, etc

7.4.2 Negative Issues
The following are negative issues raised by the neighbors/affected parties (AP) that need to be addressed;

i. Noise and vibrations during construction
ii. Dust emanating from the construction site
iii. Traffic snarl ups on the access roads
iv. Increased insecurity due to introducing a large population in the area
v. Water and Energy rationing
vi. Stagnant water on site creating breeding sites for mosquitoes

The issues raised and the foreseen impacts have been adequately addressed in the report and in the detailed ESMMP.
CHAPTER EIGHT: ANALYSIS OF PROJECT ALTERNATIVES

8.1 Introduction
In order to enable the proposed project to seek different ways of minimizing its impacts on the environment and at the same time achieve its objectives several alternatives were assessed through its architectural and engineering designs and environmental planning through this ESIA to come up with the most suitable options in implementing this project

8.2 No Project Alternative
This option implies forfeiting the proposed development and thus avoiding both the positive and negative impacts that would have arisen during its implementation. This option is mostly applicable in situations where the proposed project area is in ecologically sensitive areas. The land in which the proposed project is to be constructed is in a stable environment and therefore will not be affected by this development activity. From a socio-economic perspective the “no action” alternative may not be the best alternative as the numerous benefits to be gained from the development both locally and nationally would not be realized and the resources in the area would continue to be underutilized. What’s more, this is a noble initiative that enables low and middle income earners dwelling in the city to own homes and in sense enjoy a sense of security for their families. As we know it, ‘a happy nation is a productive nation’. The ‘No Project Option’ is the least preferred when all the cards are laid on the table.

8.3 Proposed Project Alternative
The proposed project will consist of six blocks, four comprising of one, two and three bedroom units, one block housing a parking silo, and another housing a kindergarten and other auxiliary facilities. The project, located in Zone 2, is in line with the zoning policies Nairobi City County that allows for development of commercial/residential high-rise developments. The proposed project will provide modernized quality affordable housing units, increase the governments’ revenue through taxes, provide a market for goods and services and ensure optimal use of the land. Thus, the project is a timely venture and this is the best option for the proposed site.

8.4 Alternative Design
This option curtails undertaking the project but with different infrastructural designs that encompass buildings layouts and location of supporting infrastructure. The presented project

ESIA Study Report for the Proposed Affordable Housing Development in Park road Area of Nairobi City County.

56
design was however achieved by considering the options available that would ensure cost-effectiveness and avoid or reduce environmental and social impacts as much as possible. The prevailing design shall increase commercial viability as well as its targeted balance with nature that will create ambient living conditions for its occupants. The proponent hence settled on this design as a unique design that best meets the objectives of the project.

8.5 Alternative Construction Materials and Technologies

There is a wide range of construction and furnishing materials which can be sourced locally and internationally most of which shall be low maintenance and environmentally sound. The proposed project will be constructed using reinforced concrete, natural stones for the walling, cement for mortar and plaster works, structural steel, metal scaffolds and formwork. The concrete structure will be built using locally sourced sand, cement, metal bars and fittings that meet the Kenya Bureau of Standards (KBS) requirements. The metal scaffolds will be advantageous than timber because it will reduce the wasting of precious trees, has a longer lifetime, provides a steady and firm standing, easily assembled and dismantled and it increases the work efficiency.

The technologies available include the conventional brick and mortar style, concrete frame construction, prefabricated concrete panels, timber construction, steel and aluminum frame and Expanded Polystyrene Technology. The proponent has preferred the use of reinforced concrete frame construction as the technology is durable, offers outstanding resistance to explosion and/or impact and performs well during both natural and manmade disaster. Reinforced concrete can also endure very high temperatures from fire for a long time without loss of structural integrity. Priority shall be given to construction techniques and materials that save on time and cost of construction.
CHAPTER NINE: ENVIRONMENTAL AND SOCIAL MANAGEMENT AND MONITORING PLAN (ESMMP)

Environmental monitoring involves measurement of relevant parameters, at a level of details accurate enough, to distinguish the anticipated changes. Monitoring aims at determining the effectiveness of actions to improve environmental quality. The ESMMPs outlined in the table addresses the identified issues of concern (potential negative impacts) and mitigation measures as well as roles, costs and monitorable indicators that can help to determine the effectiveness of actions to upgrade the quality of environment; as regards the proposed project.

The EMPs have considered for all phases; construction, operational and decommissioning phases.

9.1 ESMMP FOR THE CONSTRUCTION PHASE

Table 9.1: ESMMP during construction phase

<table>

</table>
| Soil erosion                | • Ensure management of excavation activities  
• Providing soil erosion control structures on the steeper areas of the site & controlling activities during the rainy season.  
• Compact loose soils to minimize wind erosion | - Proponent  
- Contractor | Routine inspection | 200,000               |
| Air pollution               | • Regular sprinkling of water on dusty areas and access roads  
• Careful screening of construction site to contain and arrest construction related dust.  
• Enclosing, covering and watering of exposed stockpiles e.g. sand  
• Ensure construction machinery and equipment are well maintained to reduce exhaust gas emission  
• Drivers of construction including bulldozers, earth-movers etc. will be under strict instructions to minimize unnecessary trips and minimize idling of engines.  
• Using efficient machines with low emission technologies for the ones that burn fossil fuels.  
• Comply with EMCA (Air quality) Regulations 2014 | - Proponent  
- Contractor  
- Workers and Drivers | Daily inspection  
Routine maintenance | 300,000               |
| Noise and excessive vibrations | • Construction activities to be restricted to daytime i.e. 8am to 6pm  
• Use of suppressors or noise shields on noisy equipment for instance corrugated iron sheet structures  
• Sensitize operators of construction machinery on effects of noise  
• Trucks used at construction site shall be routed away from noise sensitive areas where feasible.  
• Maintain plant equipment to suppress frictional noise  
• Workers in the vicinity or involved in high-level noise to wear PPE  
• Minimize vibrations by using hi-tech equipment that produces lesser vibrations during excavation.  
• Comply with EMCA (Noise and excessive vibration pollution control) Regulations 2009 | - Proponent  
- Contractor  
- Workers  
- Drivers | Random inspection  
Routine maintenance | 500,000 |
| Oil pollution | • Proper storage, handling and disposal of new / used oil and related wastes  
• Maintain construction machinery and equipment to avoid leaks  
• Maintenance of construction vehicles to be carried out in the contractors yard (off the site) | - Proponent  
- Contractor | Routine inspection maintenance | 100,000 |
| Storm water drainage | • Proper installation of drainage structures/facility  
• Ensure efficiency of drainage structures through proper design and maintenance | - Proponent  
- Contractor | Routine inspection and maintenance | 700,000 |
| Solid waste and liquid waste | • Segregate the waste at the site  
• Ensure proper disposal of construction waste to approved sites  
• Engage services of a registered NEMA waste handler to dispose the waste  
• Covering of the trucks during transportation, all the building materials and waste  
• Sensitize workers on the reuse of materials where appropriate.  
• Provision of adequate and appropriate sanitary facilities for the construction workers  
• Proper decommissioning of all the sanitary facilities  
• Comply with EMCA (Waste management) Regulations 2006 | - Proponent  
- Contractor  
- Workers | Weekly inspection | 500,000 |
| Increased water demand | • Use water from the borehole to supplement water from NCWSC  
• Employ services of waters vendors to supplement water supply  
• Sensitize occupants and workers to reduce water wastage e.g. by | - Contractor  
- Workers | Daily inspection | 350,000 |
| **Traffic congestion** | - Employ traffic marshals to control traffic in and out of site  
- Ferry building materials during off-peak hours  
- Provide traffic control signs at the site/entrance to notify motorists and general public about the development  
- Enforce speed limits for construction vehicles especially along the roads leading to the site  
- Ensure that the vehicles comply with axle load limits  
- Employ well trained and experienced drivers | - Proponent  
- Contractor  
- Drivers | Daily inspection | 200,000 |
|---|---|---|---|---|
| **Health and safety of workers** | - Construction work shall be limited to daytime only  
- Workers to be adequately insured against accidents.  
- All workers will be sensitized before construction begins on how to control accidents related to construction.  
- Keep record of the public emergency service telephone numbers including: Police, Fire brigade, Ambulance at strategic points  
- Provide first aid kits at strategic places in the site  
- All workers to wear protective gear during construction e.g. helmets.  
- A comprehensive contingency plan shall be prepared before construction begins on accident response. | - Proponent  
- Contractor  
- Workers | Weekly inspection | 200,000 |
| **Insecurity** | - Provide security guards to monitor movement in and out of the site during construction period for both day and night  
- Install security lights at the site to enhance security. | - Contractor  
- Proponent | Daily inspection | 200,000 |
| **Fire** | - Installation of firefighting facilities following City County’s Fire Masters requirements approval.  
- Develop and adapt an (fire) emergency response plan for the project  
- Ensure that all firefighting equipment are regularly maintained and serviced.  
- Provide fire hazard signs such as ‘No Smoking’ sign, Direction to exit in case of any fire incidence and emergency numbers. | - Contractor  
- Proponent  
- Workers | Routine inspection and maintenance | 100,000 |
| **Conflict with neighbours** | - Establish a grievance redress mechanism that is easy to access for stakeholders to report their concerns as they happen  
- Continuous communication between the developers and the stakeholders on the progress of the project and its effects | - Proponent | Continuous communication | 200,000 |
### 9.2 ESMMP FOR THE OPERATION PHASE

#### Table 9.2: ESMMP during Operation phase

<table>

<tr>
<th>Environmental/ Social Impact</th>
<th>Proposed Mitigation Measures</th>
<th>Responsibility for mitigation</th>
<th>Monitoring frequency</th>
<th>Estimated Cost (Kshs)</th>
</tr>
</thead>
</table>
| Liquid waste                 | • Regular inspection and maintenance of the internal sewer system.  
                                • Expansion of the trunk sewer system to accommodate the increasing load from the development | - Proponent  
                                - Occupants | Periodic checks Routine Maintenance | 300,000 |
| Solid waste generation       | • Encourage segregation of waste (organic and inorganic)  
                                • Provide for clearly marked dustbins to serve the specified use.  
                                • Ensure that wastes generated are efficiently managed through recycling, reuse and proper disposal procedures.  
                                • A private NEMA licensed company to be contracted to handle solid waste and dispose it of in designated dumpsites.  
                                • Routine cleaning of the waste collection points/cubicles | - Proponent  
                                - Occupants | Periodic inspection | 250,000 |
| Air pollution                | • Regular cleaning of dust prone areas such as driveways and corridors  
                                • Comply with EMCA (Air Quality regulations) 2014 | - Proponent  
                                - Occupants | Routine maintenance | 100,000 |
| Noise and vibration Pollution| • Do annual noise monitoring, to adhere to acceptable standards  
                                • Sensitize occupants on minimal permissible noise levels  
                                • Comply with EMCA (Noise and excessive vibration pollution control) Regulations 2009 | - Proponent  
                                - Occupants | Periodic inspection | 250,000 |
| Storm water drainage         | • Proper maintenance of drainage structures  
                                • Inspection and maintenance of water harvesting facilities  
                                • Collection of excess storm water into underground tanks for reuse e.g. car washing | - Proponent | Routine inspection and maintenance | 100,000 |
| Increased water use          | • Use water efficient appliances and fittings  
                                • Reuse of harvested rain-water e.g. cleaning pavements and cars  
                                • Place notices at water taps e.g. ‘TURN OFF TAP AFTER USE’  
                                • Provision of roof/ underground tanks for water storage  
                                • Regular maintenance of all water components | - Proponent  
                                - Occupants | Periodic Inspection Routine maintenance | 150,000 |
| Increased energy use         | • Switch off electrical appliances when not in use.  
                                • Maintenance of electrical components. | - Proponent  
                                - Occupants | Daily Observation | 150,000 |
- Use energy efficient electrical appliances and fixtures such as bulbs
- Use of solar energy as alternative energy supply for the project

## 9.3 ESMMP FOR THE DECOMMISSIONING PHASE

*Note: A due diligence environmental audit will be undertaken and submitted to NEMA at least three months prior to decommissioning and in line with the Environmental Management and Coordination Act No. 8 of 1999.*

Table 9.3: ESMMP during Decommissioning phase

<table>
<thead>
<tr>
<th>Environmental/Social Impact</th>
<th>Proposed Mitigation Measures</th>
<th>Responsibility for mitigation</th>
<th>Recommended frequency of monitoring</th>
<th>Estimated Cost (KShs)</th>
</tr>
</thead>
</table>
| Demolition of existing structures |  - Apply for demolition permit from relevant authorities before commencing the demolition  
- Engage a registered private contractor to carry out the demolition  
- Provide workers with PPE  
- The demolition exercise to be limited to day time only  
- Comply with EMCA (Noise and excessive vibration pollution control) Regulations 2009 | - Project proponent  
- Contractor  
- NEMA inspectors | Daily inspection | 2,000,000 |
| Air pollution |  - Dust suppression with water sprays on dusty areas  
- Careful screening of construction site to contain and arrest construction related dust  
- Ensure demolition machinery and equipment are well maintained to reduce exhaust gas emission | - Proponent  
- Contractor  
- NEMA inspectors | Daily inspection  
Routine maintenance | 500,000 |
| Noise and excessive vibrations |  - Demolition activities to be restricted to daytime (8am to 5pm)  
- Use of Suppressors on noisy equipment or use of noise shields for instance corrugated iron sheet structures  
- Workers in the vicinity or involved in high level noise to wear respective safety & protective gear.  
- Comply with EMCA (Noise and excessive vibration pollution control) Regulations 2009 | - Proponent  
- Contractor  
- Workers  
- NEMA inspectors | Routine inspection and maintenance | 250,000 |
| Health and safety of workers |  - All workers to wear PPEs e.g. helmets, safety boots and ear muffs  
- All workers will be sensitized before demolition begins, on how to control accidents related to construction.  
- Accordingly, adherence to safety procedures will be enforced.  
- All workers will be adequately insured against accidents. | - Contractor  
- Workers  
- Proponent  
- NEMA inspectors | Daily monitoring | 200,000 |
| Solid and liquid waste | • Ensure proper solid waste disposal and collection facilities  
• Refuse collection vehicles will be covered to prevent scatter of wastes by wind.  
• Demolition wastes to be collected by a licensed operator to avoid illegal final dumping at unauthorized sites.  
• All persons involved in refuse collection shall be in full protective attire.  
• Dismantling all fixtures and equipment of the internal sewer system | - Contractor  
- Proponent  
- NEMA inspectors | Daily monitoring | 500,000 |
|---|---|---|---|---|
| Re-vegetation and comprehensive landscaping | • Put in place an appropriate re-vegetation programme to restore the site to its original status  
• During the re-vegetation period, appropriate surface water run off controls will be taken to prevent surface erosion;  
• Monitoring and inspection of the area for indications of erosion will be conducted and appropriate measures taken to correct any occurrences;  
• Fencing and signs restricting access will be posted to minimize disturbance to newly-vegetated areas; | - Contractor  
- Proponent | Random inspection and monitoring | 350,000 |
CHAPTER TEN: CONCLUSION AND RECOMMENDATIONS

The proposed development shall bring with it numerous positive impacts including increase in the number of housing units in the area, creation of employment opportunities, improved businesses in the project area especially for various suppliers and increase in revenue to both the county and national governments among others as outlined in the report.

The negative environmental impacts that will result from establishment of the project which include increase in traffic along the access roads, air and noise pollution, increased water demand, strain to existing infrastructure among others can however be mitigated.

The proponent has committed to put in place various mitigation measures to mitigate the negative environmental, safety, health and social impacts associated with the proposed development. It is recommended that in addition to this commitment, the proponent shall focus on implementing the measures outlined in the ESMMP as well as adhering to all relevant national and international environmental, health and safety standards, policies and regulations that govern establishment and operation of such projects.

It is also recommended that the positive impacts that emanate from such activities shall be maximized as much as possible. It is expected that these measures will go a long way in ensuring the best possible environmental compliance and performance standards.
