Email: info@ketraco.co.ke

ESIA Team

1. David M. Moindi - Lead EIA/Audit Expert
2. Jillo A. Madras - Land Surveyor
3. Yvonne Odhiambo - Socio-Economist
4. Constantine K. Ng’enoh - Associate EIA/Audit Expert
5. Linet M. Mbova - Associate EIA/Audit Expert
6. Lorena Simba - Civil Engineer
7. Kennedy Njoroge - Electrical Engineer
DECLARATION AND DOCUMENT AUTHENTICATION

This document has been prepared in accordance with the Environmental (Impact Assessment and Audit) Regulation, 2003 of the Kenya Gazette Supplement No. 56 of 13th June, 2003, Legal Notice No. 101.

Lead EIA/AUDIT EXPERT

Name: Caleb Mathews Okoth Mango
Registration No.: 260
Signature: [Signature]
Date: 12/03/2020

FOR PROPOONENT
Kenya Electricity Transmission Company Limited
KAWI Complex, Block B
Popo Road, off Red Cross Road, South C
P. O. Box 34942-00100 Nairobi
Phone: +254 20 495 6000, 0719018000 / 0732128000

Name: Eng.(Dr.) John Mativo
Designation: Ag. General Manager, Project Development Services
Signature: [Signature]
Date: 12/03/2020

Do hereby certify that this report was prepared based on the information provided by various stakeholders as well as that collected from other primary and secondary sources and on the best understanding and interpretation of the facts by the Environment Social & Impact Assessors. It is issued without prejudice.
EXECUTIVE SUMMARY

The country’s long-term development blue print, Vision 2030 aims at transforming Kenya into a globally competitive newly industrialized middle-income and prosperous country. The Second Medium Plan 2013-2017 identifies energy as one of the enablers for transformation into “a newly-industrializing, middle-income country providing a high quality of life to all its citizens in a clean and secure environment”. Efficient, accessible and reliable infrastructure is identified as an enabler for achieving sustainable economic growth, development and poverty reduction by lowering the cost of doing business and improving the country’s global competitiveness.

The energy sector plays a critical role in the socio-economic development of a country. Kenya is committed to universal access to modern forms of energy by year 2030, as articulated in the Vision 2030 (the Vision). Energy is identified as a critical enabler of this Vision. According to KPLC annual report 2016/2017 the national electricity access stood at 70.3%. The company aims at attaining universal access by the year 2020. To attain this universal coverage alongside providing reliable and affordable power, the government is implementing various projects all over the country.

During his second term (2018-2022), the President of Kenya His Excellency Uhuru Kenyatta announced his new plan, the ‘Big Four’ to guide the development agenda of the country. The Big Four focuses on key basic needs that are critical in uplifting the standard of living of Kenyans on the path to becoming an upper middle-income country by 2030. The agenda priorities are affordable and decent housing; affordable healthcare; food and nutritional security; and, employment creation through manufacturing (Kara, 2019).

In a bid to attaining the Big 4 Agenda, the government has begun realigning its resources towards reviving manufacturing, boosting food production, security, building affordable housing and expanding access to medical care. These targets can be achieved through reliable, accessible and affordable electricity.

Project Objectives

The main objective it to construct a 33kV and 11kV overhead distribution lines and connection of some public utilities and individuals in Kajiado County along the transmission line corridor.

Specific Objectives include:

- Designing and constructing of a 33kV Distribution line in compliance with electric generation regulatory authorities (ERC, Ministry of energy)
- Ensure sustainability of the project by complying with national laws especially those touching on environment
The proposed project falls under project classified under Schedule II of Environment Management and Coordination Act (EMCA) Cap 387, which requires such projects to undergo environmental impact assessment. This study report therefore done as per the requirements of EMCA Environmental (Impact and Audit) Regulations, 2003. This can be highlighted as below:

**Chapter 1  Introduction:** The chapter give a description of the project background, the ESIA Project study objectives; Project Justification; ESIA process; the Project Scope; Terms of Reference and ESIA Approach and Methodology

**Chapter 2  Policy Legal and Institutional Framework:** This chapter highlights the current guiding national policy, the relevant national legal applicable to the project and the relevant institutions deemed associated with the proposed project and their roles.

**Chapter 3  Project Description:** This chapter gives a detail information on the nature of the proposed project; the location; site ownership; the project design and layout; materials to be consumed be the project; labour required and the project activities at the different phases of project cycle.

**Chapter 4  Baseline information:** The Chapter give a description of Kajiado County and narrows it down to the proposed project site in regards to environmental and Socio-economic elements related to the project

**Chapter 5  Stakeholder consultation:** Public participation is enshrined in the Kenya Constitution of 2010. This chapter highlights the procedure followed in conducting stakeholder engagement; objectives; identification of Stakeholders and the outcome from stakeholder engagement.

**Chapter 6  Potential Environmental Impacts and Mitigation:** This chapter highlights both the positive and negative impact that might result from project implementation. The positive include creation of job opportunities; reliable electricity supply; boost local economic development; promotion of green energy; opportunity to enable value addition; improvement of quality education and enhanced security. While the possible negative impacts could include noise pollution; oil spill; increased water demand; dust emission; workers’ incidents and accidents; workers’ influx, diseases and crime; solid waste generation, increase energy consumption and disruption of visual esthetics. The chapter further provides possible mitigation measures aim at minimizing or eliminating the negative impact.

**Chapter 7  Analysis of project alternatives:** This chapter highlight the option that are available to the project including the “No option”.
Chapter 8  Environmental and Social Management Plan (ESMP): This chapter outlines the resources, roles and responsibilities required to manage environment and social impacts and implement mitigation measures.

Chapter 9  Environmental and Social Monitoring Plan: This Chapter give the monitoring measures to ensure that the project is environmentally sustainable.

The report seeks approval of the proposed project and issue of EIA license by National Environment Management Authority (NEMA). The report strongly recommend that the proponent ensure that the EMP is strictly implemented and that all EIA license conditions are adhered to ensure that the project is implemented sustainably.

CHAPTER ONE

INTRODUCTION

1.1 Project Background
Energy is a critical component in the economy, standard of living and national security of a country. The level and the intensity of energy use in a country is a key indicator of the economic growth and development. The Kenya Vision 2030 identified energy as one of the infrastructure enabler of its socio-economic pillar. Sustainable, competitive, affordable and reliable energy for all citizens is a key factor in realization of the Vision.

Electricity is a secondary source of energy generated through the consumption of primary energy sources namely petroleum, coal, renewable energy and nuclear energy. By virtue of its versatility in application, electricity is crucial to the socio-economic development of the country and is the most sought after energy service. Access to electricity is associated with rising or high quality of life.

Reforms and restructuring of the Kenyan electricity supply industry (ESI) has been going on since the mid-90s with the aim of:

- Creating appropriate legal, regulatory and institutional framework for the industry
- Ensuring provision of affordable, competitive, reliable, efficient and sustainable electric power supplies
- Increasing the population’s access to electricity as a means of stimulating economic growth
- Improving the efficiency of power distribution and supply through reductions in system losses and collection of revenues
- Creating a more competitive market structures with clear delineation of roles for public and private sector players in generation, transmission, distribution and retail functions

The rural electrification program was started in 1973 as part of the basic infrastructure to stimulate socio-economic growth, stem rural-urban migration through creation of social amenities and employment opportunities at close proximities to the rural population and thus uplift the quality of life in the rural areas. However, the rate of penetration has been slow with only 91,069 directly metered consumers having benefited from the program by January 2004. The low penetration level is attributed to past mismanagement of financial resources, high cost of network extension, low consumer densities and the scattered nature of the human settlements in rural Kenya. In 2003, it costed more than KShs.1.2 million
on average to construct a kilometer of an 11kV or a 33kV line. Thus, the average cost of supplying a rural consumer was Kshs. 180,000, which is about seven times the national per capita income in 2002. Rural electrification schemes also incur higher operating costs per unit sold than the KPLC system sales. For example, over the period 1997/98 to 2001/02 the average cost of selling one unit of electricity under the rural electrification program was Kshs. 12.4 per kWh for the interconnected system as opposed to KShs.7.78 per kWh for KPLC, while for the isolated program schemes the cost was KShs.32.0 per kWh.

The Kenya Electricity Transmission Company (KETRACO) is currently constructing a 400kV 100km transmission line that will subsequently link Kenya and Zambia through Tanzania. As part of Corporate Social Responsibility (CSR), KETRACO further intends to further construct a network of low voltage power distribution lines aimed at mainly connecting public utilities to the national grid. The distribution lines will eventually contribute in further opening up the project area, spur development and support other sectors that depend on power.

1.2 Objectives of the ESIA

The general objectives of the ESIA are:

1. To conduct baseline biophysical and socio-economic survey of the project area
2. To identify the potential positive and negative environmental and social impacts of the distribution line
3. To engage relevant stakeholders
4. To develop an environmental and social management plan (ESMP) for design, construction, operation and decommissioning phase of the proposed project

1.3 ESIA Methodology

The process of ESIA involved the following:

- Review of relevant secondary data
- Collection, reviewing and analyzing relevant information from key project stakeholders
- Baseline survey/assessment of the line route
- Conducting public meetings (barazas) with the communities affected and beneficiaries of the project
- Identifying environmental and social positive and negative impacts
- Analyzing impacts
• Providing appropriate mitigation measures against negative impacts
• Analysis of project alternatives
• Developing ESMP

1.4 Scope of the Study

The EIA scope largely covered the following areas:

(1) Baseline Conditions:
  • Environmental setting (climate, topography, geology, hydrology, ecology, water resources, sensitive areas etc.),
  • Socio-economic activities in the surrounding areas (land use, human settlements, economic activities, institutional aspects, water demand and use, health and safety, public amenities, etc.),
  • Infrastructural issues (roads, water supplies, drainage systems, power supplies, etc.).

(2) Legal and policy framework:
  • Focusing on the relevant national environmental laws, regulations and by-laws and other laws and policies focusing on allied activities relative to the project in question.

(3) Interactive approach was adopted for the immediate neighbourhood in discussing relevant issues including among others:
  • Land use aspects,
  • Neighbourhood issues,
  • Project acceptability,
  • Social, cultural and economic aspects,

(4) Environmental impacts:
  • Physical impacts,
  • Biological impacts,
  • Legal Compliance.
1.5 Terms of Reference (TOR) for the ESIA Process

The TOR of the ESIA project report includes but not limited to:

- Description of the baseline environment (physical, biological, social and cultural)
- Detailed description of the proposed project
- Review Legislative and regulatory framework that relate to the project
- Identify potential environmental impacts that could result from the project
- Carry out public consultation on positive and negative impacts of the project
- Propose mitigation measures against identified environmental and social impacts of the project
- Development of an Environmental and Social Management Plan to mitigate negative impacts
- Development of an Environmental Monitoring Plan
- Environmental and Social Impact Assessment Report
CHAPTER TWO

POLICY, LEGAL AND INSTITUTIONAL FRAMEWORK

2.1 Policy Framework

2.1.1 The constitution of Kenya, 2010

I. The Constitution has enhanced protection and enforcement of fundamental rights amongst other gains. It provides for two tier structure of government, the National and the County Government. It distributes the functions and power between the two levels as detailed in Chapter Eleven and Fourth Schedule.

II. Specifically, in relation to the energy sector, Part 1 of the Fourth Schedule provides that the National Government shall be responsible for:

a) Protection of the environment and natural resources with a view to establishing a durable and sustainable system of development including water protection, securing sufficient residual water, hydraulic engineering and the safety of dams;

b) Energy policy including electricity and gas reticulation and energy regulation; and

c) Public investment

III. In relation to the County Government, part 2 of the Fourth Schedule provides that they shall be responsible for the county planning and development including electricity and gas reticulation and energy regulation

2.1.2 Sessional Paper No. 4 on Energy 2004

The policy was established to promote equitable access to quality energy services at least cost while protecting the environment.

The policy paper led to establishment of Rural Electrification Authority to accelerate the pace of rural electrification in the country; Kenya Electricity Transmission Company Limited, 100% state owned to be in charge of transmission; and Geothermal Development Company to be in charge of geothermal resource assessments and sale of steam to future Independent Power Producers.

Energy policy specific objectives are to:

a) provide sustainable quality energy services for development;

b) utilize energy as tool to accelerate economic empowerment for urban and rural development;
c) improve access to affordable energy services;
d) provide an enabling environment for the provision of energy services;
e) enhance security of supply;
f) promote development of indigenous energy resources; and,
g) promote energy efficiency and conservation as well as prudent environmental, health and safety practices.

The policy objectives are to expand access to electricity as a means to promote sustainable socio-economic development of rural communities. The goal is to accelerate the pace of rural electrification through grid extension and off-grid projects, taking into account economic cost effectiveness criteria, and emphasizing productive use of power for growth and employment creation. Government’s goal is to provide electricity service connections to 20% of the rural population by 2010, increasing to at least 40% by 2020.

The Government encourages and promote private sector initiatives to enter clean biomass and other renewable technologies energy market. Furthermore, the Government intends to allocate resources to research into and promote mature alternative sources of energy and renewable energy technologies.

2.2 Legal Framework

2.2.1 Environmental Management and Coordination Act, Cap 387

The Section Part VI of EMCA 2015 Part II states that every person is entitled to a clean and healthy environment and has the duty to safeguard the same. In order to achieve this goal, the projects listed under the Schedule No. 2 of EMCA must be subjected to Environmental Impact Assessment (EIA). The aim of EIA is to reduce negative environmental outcomes of the listed projects by implementing mitigation measures. The proposed project falls within the Second schedule and must therefore comply with EMCA requirements in as far as EIA is required. There are also several regulations that have been formulated within the framework of EMCA 2015 that are applicable to the proposed project. These are listed in the following sections.
2.2.1.1 Environmental Management and Co-ordination (Environmental Impact Assessment and Audit) Regulations, 2003, Legal Notice No. 101

The Environmental (Impact Assessment and Audit) Regulations provides guidelines for conducting EIA studies. The regulations provide details on the parameters to be evaluated when undertaking an EIA study. It also provides guidelines on the conduct of environmental audits and development of project monitoring plans.

_The proposed project must comply with the requirements of the regulations that also include conducting continuous monitoring and annual audits on the proposed project._

2.2.1.2 Environmental Management and Co-ordination (Water Quality) Regulations, 2006, Legal Notice No. 120

The EMCA (Water Quality) Regulations, 2006 provide guidelines on the use and management of water sources in order to safeguard quality of water for domestic use and irrigation, among others. The proposed project will need to comply with the requirements of this regulation in order to ensure water sources in the neighbouring areas are protected from pollution and over-abstraction. The project will also need to comply with the regulations that prohibit undertaking of development within a minimum of 6m from the highest ever recorded flood level of a river system. Section 4(2), 6 and Section 24 of the regulation prohibits pollution of water bodies and requires that all substances discharged into the water bodies should meet the standards set under the Third Schedule of the regulation. Everyone is required to refrain from any actions, which directly or indirectly cause water pollution, whether or not the water resource was polluted before the enactment of the Environmental Management and Coordination Act (EMCA) Gazetted in 2015. It is an offence to contravene the provisions of these regulations with a fine not exceeding five hundred thousand shillings.

Most of the rivers within the project areas are seasonal. The proponent will ensure that the distribution line routing avoid these water ways.

2.2.1.3 Environmental Management and Co-ordination (Fossil Fuel Emission Control) Regulations, 2006

The EMCA (Fossil Fuel Emission Control) Regulations, 2006 aims at eliminating or reducing emissions emitted from internal combustion engines to acceptable levels. The regulation provides guidelines on use of clean fuels, use of catalysts and inspection procedures for engines and generators. This regulation is
applicable to the proposed project since there would be use of vehicles, machineries and equipment that depend on fossil fuel as their source of energy. The requirements of the regulation must be implemented in order to eliminate or reduce air quality degradation. Sections of the regulation citing the standards of recommended emission levels will be given to the contractor and or pinned at strategic points in the contractor’s field offices.

In compliance to the provisions herein, the report has given recommendations and measure to mitigate the emissions.

2.2.1.4 Environmental Management and Co-ordination (Conservation of Biological Diversity and Resources, Access to Genetic Resources and Benefit Sharing) Regulations, 2006

The EMCA (Conservation of Biological Diversity and Resources, Access to Genetic Resources and Benefit Sharing) Regulations, 2006 provides that no person shall engage in any activity that may have an adverse impact on any ecosystem; may lead to the introduction of any exotic species or to unsustainable use of natural resources, without an Environmental Impact Assessment License issued by the Authority under the Act.

The regulation requires NEMA in consultation with the relevant lead agencies, to impose bans, restrictions or similar measures on the access and use of any threatened species in order to ensure its regeneration and maximum sustainable yield.

The proponent that biological diversity within the project area is conserve. Minimal interruption of vegetation.

2.2.1.5 Environmental Management and Co-ordination (Waste Management Regulations, 2006)

The Waste Management Regulations are basically aimed at streamlining the handling, transportation and disposal of various types of wastes. The broad goal of the regulations is to protect human health and the environment. The regulations place emphasis on waste minimization, cleaner production and segregation of waste at source. The regulations have also classified various types of waste and recommended appropriate disposal methods for each waste type. Under the regulations, NEMA is supposed to licenses transporters, incinerators, landfills, composers, recyclers and transfer stations. Facilities to be licensed
include local authorities, transporters and handlers of various types of waste. The licensing employs a risk-based approach by concentrating on facilities considered to pose a high risk to the environment. The regulations also provide an opportunity for investment in various aspects of waste management. During the construction of the proposed NSCC, proper disposal of wastes will need to be observed by the contractor at all areas of working. This will ensure good hygiene and healthy working environment for workers.

*In compliance to this, the contractor and the proponent will ensure there exists proper contractual agreement with licensed solid waste handlers and that solid wastes are disposed in the manner prescribed*

### 2.2.1.6 Environmental Management and Co-ordination (Controlled Substances) Regulations, 2007

The EMCA (Controlled Substances) Regulations aims at controlling the production, consumption and, exports and imports of controlled substances. Controlled substances are grouped into three lists as indicated below:

- Group 1 list consists of halogenated flouro-chemicals with ozone depleting substances.
- Group 2 list consist of hydrobromofluorocarbons with ozone depleting substances.
- Group 3 list consist of bromochloromethane with ozone depleting substances.

Products containing controlled substances include air conditioners, air coolers, refrigerants, portable fire extinguishers, heat pump equipment, dehumidifiers, insulation boards, panels and pipe covers, pre-polymers, etc.

*The project contractor and the proponent will need to ensure that the requirements of this regulation are observed in order to ensure that equipment, machinery, vehicles and chemicals containing such components are not imported into the country for use in the proposed project.*

### 2.2.1.7 Environmental Management and Co-ordination (Wetlands, River Banks, Lake Shores and Sea Shore Management) Regulations, 2009

The Environmental Management and Co-ordination (Wetlands, River Banks, Lake Shores and Sea Shore Management) Regulations, 2009 applies to all wetlands in Kenya whether occurring in private or public land. The objectives of the regulations are to provide for the conservation and sustainable use of wetlands and their resources in Kenya and promote the integration of sustainable use of resources in wetlands into
the local and national management of natural resources for socio-economic development. The Act also aims at ensuring the conservation of water catchments and the control of floods and the sustainable use of wetlands for ecological and aesthetic purposes for the common good of all citizens. The Act also makes provision for the protection of wetlands as habitats for species of fauna and flora. It also provides a framework for public participation in the management of wetlands.

The Act requires wetland resources to be utilized in a sustainable manner compatible with the continued presence of wetlands and their hydrological, ecological, social and economic functions and services. The Act requires special measures to be undertaken to preserve and maintain knowledge innovations and practices of indigenous and local communities embodying traditional lifestyles relevant for the conservation and sustainable use of biological diversity in wetlands.

The regulation also calls for sustainable use of wetlands through integration into the national and local land use plans to ensure sustainable use of wetlands in the country.

_The project will traverse some of the seasonal rivers, proponent will ensure that riparian areas are not encroached_

### 2.2.1.8 Environmental Management and Co-ordination (Noise and Excessive Vibration Pollution Control) Regulations, 2009

The Noise and Excessive Vibration Pollution Control Regulations, 2009 prohibits excessive noise and vibration. It states that no person shall make or cause to be made any loud, unreasonable, unnecessary or unusual noise which annoys disturbs, injures or endangers the comfort, repose, health or safety of others and the environment. The contactor of the project will have to ensure that no excessive noise and vibrations are made during the construction stage. This is important since the construction of the project involve use of heavy earthmoving equipment and trucks which can generate excessive noise and vibrations. Motor vehicles used during the construction of the proposed project should also adhere to the regulations which prohibit excessive noise.

The provision of the act on motor vehicle states that no person shall operate a motor vehicle which produces any loud and unusual sound exceeding 84 dB(A) when accelerating (See table Below).

The Act also states that, “no person shall at any time sound the horn or other warning device of a vehicle except when necessary to prevent an accident or an incident. Any person carrying out construction,
demolition, mining or quarrying work should ensure that the vibration levels do not exceed 0.5 centimetres per second beyond any source property boundary or 30 metres from any moving source”.

All these provisions have been comprehensively catered for in this report at the Environmental and Social Management Plan and their adherence shall be closely monitored.

2.2.2 The Energy Act, 2019

The act was enacted in 2006. It sought to amend and consolidate the law relating to energy, provide for the establishment, powers and functions of the Energy Regulatory Commission, the Energy Tribunal and the Rural Electrification Authority.

The Act provides the regulatory framework for the energy sector and, among other things, stresses the need for energy players in general and electrical energy players in particular to adopt environmentally friendly and sustainable practices in power generation, distribution and consumption. It sets standards for proper environmental management in the sector. Section 30 (1) part (b) of the Act states compliance with the EMCA, 2015 as an important criterion to be considered by the ERC during the registration and supervision of sector players.

2.2.3 The Wildlife Management and Conservation Act 2013

This Act was enacted to consolidate and amend the law relating to the protection, conservation and management of wildlife in Kenya, and for purposes connected therewith and thereto.

Part VI, Section 30 states that Any activity which is likely to have adverse effects on the environment, including the seepage of toxic waste into streams, rivers, lakes and wetlands is prohibited.

The proponent will ensure that there is no hunting of wildlife.

2.2.4 The Standard Act, Cap 496

The Act established Kenya Bureau of Standards whose function are: -

a) To promote standardization in industry and commerce;

b) To make arrangements or provide facilities for the testing and calibration of precision instruments, gauges and scientific apparatus, for the determination of their degree of accuracy by comparison with standards approved by the Minister on the recommendation of the Council, and for the issue of certificates in regard thereto;

c) to make arrangements or provide facilities for the examination and testing of commodities and any material or substance from or with which and the manner in which they may be manufactured, produced, processed or treated;
d) to control, in accordance with the provisions of this Act, the use of standardization marks and distinctive marks;

e) to prepare, frame, modify or amend specifications and codes of practice;

f) to encourage or undertake educational work in connection with standardization;

g) to assist the Government or any local authority or other public body or any other person in the preparation and framing of any specifications or codes of practice

The proponent will adhere to the set standards specified by KEBS for electrical equipment and power supply

2.2.5 The Forest Conservation and Management Act of 2016

The Act establishes Kenya Forest Service and give its core functions. This Act makes provision for the conservation and management of public, community and private forests and areas of forest land that require special protection, defines the rights in forests and prescribes rules for the use of forest land. It also makes provision for community participation of forest lands by community forest association, the trade in forest products, the protection of indigenous forests and the protection of water resources.

The proposed project does not traverse any forest. However, the contractor and the proponent will ensure that minimal vegetation clearance as well as promote tree plantation toward attaining 10% forest cover in Kenya

2.2.6 Occupational Safety and Health Act, 2007

The Occupational Safety and Health Act 2007 applies to all workplaces where any person is at work, whether temporarily or permanently. The purpose of the Act is to secure the safety, health and welfare of persons at work and protect persons other than persons at work against risks to safety and health arising out of, or in connection with, the activities of persons at work.

Section 16 provides that no person shall engage in any improper activity or behaviour at the workplace, which might create or constitute a hazard to that person or any other person.

The contractors of the proposed project and the operators will need to fully comply with the requirements of the Occupational Safety and Health Act 2007.
2.2.7 The Land Act, 2012

The lands Act was enacted in May 2012 to provide for the review, consolidation and rationalization of land laws and to provide a framework for sustainable management and utilization of all categories of land. It provides a legal framework for administration and management of public and private land, leases, charges, compulsory acquisition, easements and related rights.

Section 61 of Kenyan constitution recognizes three classification of land; public, community or private.

- **Public land**: It includes all un-alienated government land held and occupied by government agencies, territorial sea and sea bed, all public roads whether gazetted or not and any land not classified as private or community land under the Constitution; and any other land declared to be public land by an Act of Parliament.

- **Community land**: This is all land vested in and held by communities identified on the basis of ethnicity, culture or similar community of interest. Any unregistered community land shall be held in trust by county governments on behalf of the communities.

- **Private land**: This is land which is registered and held by any person under freehold tenure; or land held by any person under leasehold tenure; and any other land declared private land under an Act of Parliament.

*The proposed project will traverse private land, some registered to individual and some communally owned. The distribution component will utilise the road reserve.*

2.2.8 The Water Act, 2016

This Act provides for the regulation, management and development of water resources and water and sewerage services in line with the Constitution. Authorities shall, in administering or applying this Act, be guided by the principles and values set out in Articles 10, 43, 60 and 232 of the Constitution. It establishes the Water Resources Authority ("Authority"), the National Water Harvesting and Storage Authority, the Water Services Regulatory Board, the Water Sector Trust Fund and the Water Tribunal.

The Act states that, A permit is required for any of the following purposes:

- a) any use of water from a water resource, except as provided by section 37 of the Act;
- b) the drainage of any swamp or other land;
2.2.9 The Public Health Act (Cap. 242)

The Public Health Act regulates activities detrimental to human health. An environmental nuisance is one that causes danger, discomfort or annoyance to the local inhabitants or which is hazardous to human health. Although the Act is primarily concerned with domestic water supplies and sources of water used for human consumption, its regime may be extended to cover rivers, streams, lakes and underground water resources since these are the basic water sources for the majority of Kenya’s population.

It also outlines the standards of construction of various facilities of any place. In terms of air pollution thermal plants are said to emit a variety of gases, volatile organic compounds and particulate matter depending on the amount and type of fuel used and method used for burning. It is therefore necessary to monitor the air pollution. The Act prohibits activities (nuisances) that may be injurious to health. The primary purpose of the Act is to secure and maintain public health. It defines nuisances on land and premises and empowers public health authorities to deal with such conditions.

Part IX, section 115, of the Act states that no person/institution shall cause nuisance or condition liable to be injuries or dangerous to human health. Section 116 requires that Local Authorities take all lawful, necessary and reasonably practicable measures to maintain their jurisdiction clean and sanitary to prevent occurrence of nuisance or condition liable to be injuries or dangerous to human health.

On responsibility of the Local Authorities Part XI, section 129, of the Act states in part “It shall be the duty of every local authority to take all lawful, necessary and reasonably practicable measures for preventing any pollution dangerous to health of any supply of water which the public within its district has a right to use and does use for drinking or domestic purposes. Section 130 provides for making and imposing regulations by the local authorities and others the duty of enforcing rules in respect of prohibiting use of water supply or erection of structures draining filth or noxious matter into water supply as mentioned in section 129. This provision is supplemented by section 126A that requires local authorities to develop by-laws for controlling and regulating among others private sewers, communication between drains, power...
lines, and sewers as well as regulating sanitary conveniences in connection to buildings, drainage, cesspools, etc. for reception or disposal of foul matter. Part XII, Section 136, states that all collections of water, sewage, rubbish, refuse and other fluids which permits or facilitates the breeding or multiplication of pests shall be deemed nuisances and are liable to be dealt with in the matter provided by this Act.

*The Proponent shall observe its provisions and implement measures to safeguard public health and safety.*

### 2.3 Institutional framework

#### 2.3.1 Ministry of Energy

It is responsible for formulating and articulation of energy policies through which it provides an enabling environment for all stakeholders. Its tasks include national energy planning, training of manpower and mobilization of financial resources.

#### 2.3.2 Energy and Petroleum Regulatory Authority (EPRA)

It was established as an energy sector regulator under the Energy Act, 2006, with responsibility for economic and technical regulation of electric power, renewable energy, and downstream petroleum sub-sector. Its functions also include tariff setting, review, licensing, enforcement, dispute settlement and approval of power purchase and network service contracts.

#### 2.3.3 Energy Tribunal

This quasi-judicial body was established under section 108 of the Energy Act, 2006. It came into operation in July 2007 to primarily hear appeals against the decisions of ERC. It also has jurisdiction to hear and determine all matters referred to it relating to the energy sector.

#### 2.3.4 Kenya Power

Kenya Power is a State Corporation with GoK shareholding of 50.1% and private shareholding of 49.9% as at June 2014. It purchases electrical energy in bulk from KenGen, GDC and other power producers and carries out distribution, supply and retail of electric power. The proposed project will be handed over to Kenya Power for maintenance and billing.
2.3.5 Kenya Electricity Generating Company Limited (KenGen)

KenGen is a State Corporation with GoK shareholding of 70% and private shareholding 30% as at June 2014. It is mandated to generate electric power, currently producing the bulk of electricity consumed in the country. The company currently utilizes various sources including hydro, geothermal, thermal and wind to generate electricity.

2.3.6 Rural Electrification and Renewable Energy Corporation (REREC)

REREC was established under section 66 of the Energy Act of 2006 as a body corporate with the principal mandate of extending electricity supply to rural areas, managing the rural electrification fund, mobilizing resources for rural electrification and promoting the development and use of renewable energy.

2.3.7 Geothermal Development Company Limited (GDC)

This is a 100% state-owned company established by the Government of Kenya as a special purpose for development of geothermal resources in Kenya.

2.3.8 Independent Power Producers (IPPs)

IPPs are private companies which generate power and sell electricity in bulk to Kenya Power. As at November 2014 there were nine IPPs in operation which accounted for about 24% of the country’s installed capacity.

2.3.9 Nuclear Power and Energy Agency (NUPEA)

KNEB is charged with the mandate of spearheading and fast tracking development of nuclear electricity generation in order to enhance the production of affordable and reliable electricity.

2.3.10 Center for Energy Efficiency and Conservation (CEEC)

The center was established jointly by GoK and the Kenya Association of Manufacturers to champion energy efficiency and conservation efforts in Kenya.

2.3.11 National Environment Management Authority (NEMA)

National Environment Management Authority (NEMA) is the institution with the legal authority to exercise general supervision and coordination over all matters relating to the environment. It is the principal instrument of the government charged with the implementation of all policies relating to the environment. NEMA’s functions are more particularly set out in section 9(2) of the EMCA act, 2015.
According to section 68 of the Environmental Management and Coordination Act (EMCA) 2015, The Authority shall be responsible for carrying out environmental audits on all activities that are likely to have a significant effect on the environment.

Environmental Auditing (EA) is a tool for environmental conservation and has been identified as a key requirement for existing facilities to ensure sustainable operations with respect to environmental resources and socio-economic activities in the neighbourhood of the facilities.

The government has established regulations to facilitate the process on Environmental Impact Assessments and Audits. The regulations are contained in the Kenya Gazette Supplement No. 56, legislative supplement No. 31; legal notice No. 101 of 13th June 2003.

The authority core functions are:

- Coordinating the various environmental management activities being undertaken by the lead agencies
- Promote the integration of environmental considerations into development policies, plans, programs and projects, with a view to ensuring the proper management and rational utilization of environmental resources, on sustainable yield basis, for the improvement of the quality of human life in Kenya.
- To take stock of the natural resources in Kenya and their utilization and conservation.
- Carry out surveys, which will assist in the proper management and conservation of the environment.
- Advise the Government on legislative and other measures for the management of the environment or the implementation of relevant international conventions, treaties and agreements.
- Undertake and coordinate research, investigation and surveys, collect, collate and disseminate information on the findings of such research, investigations or surveys.
- Mobilize and monitor the use of financial and human resources for environmental management.
- Identify projects and programs for which environmental audit or environmental monitoring must be conducted under this Act.
• Initiate and evolve procedures and safeguards for the prevention of accidents, which may cause environmental degradation and evolve remedial measures where accidents occur e.g. floods, landslides and oil spills.

• Monitor and assess activities, including activities being carried out by relevant lead agencies, in order to ensure that the environment is not degraded by such activities. Management objectives must be adhered to and adequate early warning on impending environmental emergencies is given.

2.3.12 National Environmental Council (NEC)
The National Environment Council established under section 4 of part 3 of the EMCA act consists a board which comprises the Chairman (Minister), PS of the relevant ministry, representatives from public universities, representatives from research institutions, NGO representatives, Director General (Secretary) and such number of members as may, from time to time, be co-opted by the minister to be members of the council.

2.3.13 The National Environmental Action Plan Committee
National Environmental committee is supposed to prepare a national environmental action plan after every 5 years for consideration and adoption by the National Assembly. The NEAP is a compilation of National Environment Action Plans which are prepared by the County environment committee.

2.3.14 The County Environmental Committee
County Environmental Action Plan Committee is charged with the responsibility of preparing a county environmental Action based on the county environmental plan. The County Environmental action plans are further compiled at the national level.

2.3.15 The National Environmental Complaints Committee
The Act (EMCA) has also established a National Environmental Complaints Committee, which provides the administrative mechanism for addressing environmental harm. The Committee has the mandate to investigate complaints relating to environmental damage and degradation. Its’ members include representatives from the Law Society of Kenya, NGOs and the business community.

2.3.16 Directorate of Occupational Health and Safety
The institution will be task for registration of the construction site as a work place and enforcing compliance with Occupational Health and Safety Regulations at the construction site
## 2.4 World Bank Environmental and Social Safeguard

<td>• Contractor will consider gender parity in employment</td>
<td></td>
</tr>
</tbody>
</table>
- To protect vulnerable workers.
- To prevent the use of all forms of forced labor and child labor.
- To support the principles of freedom of association and collective bargaining of project workers in manner consistent with national law.
- To provide project workers with accessible means to raise work place.

**ESS3: resource efficiency and pollution prevention and management.**

- To promote the sustainable use of resources, including energy, water and raw materials.
- To avoid or minimize project-related emissions of short and long-lived climate pollutants.
- To avoid or minimize generation of hazardous and non-hazardous waste.
- To minimize and manage the risks and impacts associated with pesticide use.

- The proponent will ensure that the contractor implements the recommendations as stated in EMP.

**ESS4: community health and safety**

- To avoid or minimize community exposure to project-related traffic and road safety risks, diseases and hazardous materials.
- To have in place effective measures to address emergency events.

- The proponent will strive to create awareness throughout the project life cycle.
- Proponent will develop emergency response mechanisms where applicable.

**ESS5: Land Acquisition, restrictions on Land Use and Involuntary Resettlement**

- To avoid involuntary resettlement or, when unavoidable, minimize involuntary resettlement by

- The project will not involve any resettlement.
ESIA study report for proposed Rural Electrification along 400kV Kenya Tanzania Power Interconnector Project, LOT K2

exploring project design alternatives.

- To avoid forced eviction.

ESS6: Biodiversity conservation and sustainable management of living natural resource

- To protect and conserve biodiversity and habitats.
- To apply the mitigation hierarchy and the precautionary approach in the design and implementation of projects that could have an impact on biodiversity.
- To promote the sustainable management of living natural resources.

The report advises the Proponent on physical and environmental aspects, potential impacts, and proposes mitigation measures that need to be implemented and monitored as a basic guideline for the management of environmental and biodiversity aspects in the proposed project area.

- The proponent will ensure that the biodiversity is conserved and natural resource utilized sustainably throughout the project life cycle.

ESS7: Indigenous people

- To avoid adverse impacts of projects on indigenous people.
- To recognize, respect and preserve the culture, knowledge, and practices of indigenous people.
- To ensure that the development process fosters full respect for the human rights, dignity, aspirations, identity, culture and natural resource-based livelihoods of indigenous people.

This report advises the proponent to respect and preserve the culture and human right of indigenous people.

ESS8: Cultural heritage

- To protect cultural heritage from adverse impacts of project activities and support its preservation.

This report advice the proponent that not to undertake any event that will directly or indirectly interfere with the cultural heritage.
• To address cultural heritage as an integral aspect of sustainable development.

• To promote meaningful consultation with stakeholders regarding cultural heritage.

• To promote the equitable sharing of benefits from the use of cultural heritage.

**ESS9: Financial intermediaries**

• To promote good environmental and social management practices in the subprojects the FI finances.

• To promote good environmental and sound human resources management within the FI.

• The report provides recommendations and mitigations for good environmental and social management practices.

---

**ESS10: stakeholder engagement and information disclosure.**

• To provide PAPs with accessible and inclusive means to raise issues and grievances, and allow borrowers to respond to and manage such grievances.

• To ensure the appropriate project information on environmental and social risks and impacts is disclosed to stakeholders in a timely, understandable, accessible and appropriate manner and format

• Proponent will establish proper grievance mechanism to reporting and responding to PAPs grievances.

• This report advice the proponent to ensure that;

  a) The environmental and social information is disseminated correctly and accurately.

  b) Make sure that the environmental and social risks and impacts information is factual.
CHAPTER THREE

PROJECT DESCRIPTION

3.1 Project Location
The project will be implemented within Kajiado county. The project will target communities living along the proposed Kenya_Tanzania_400kV Interconnector project. Approximately 36 settlement schemes will benefit from the project. Community facilities such as boreholes will also be connected.

Map 1: Kenya Counties,
The proposed project will target the project affected people along Kenya-Tanzania 400kV transmission line and Isinya-Namanga 132kV TL as shown in Map 2 above.

### 3.2 Project Justification

KETRACO is mandated to design, construct, operate and maintain high voltage transmission line. In line to this, KETRACO is implementing two electricity transmission lines in Kajiado Central, Kajiado County. The two transmission lines are; Kenya-Tanzania 400 kV and Isinya Namanga 132 kV. These two project underwent Environmental Impact Assessment Study and the reports thereof approved and licenses issued to that effect.

With the implementation of the two projects, the Project Affected Persons within the wayleaves of the projects in consultation with KETRACO requested to have an electricity distribution component to their households and community amenities in proximity to the transmission lines’ wayleave as a Corporate Social Responsibility. It is in this backdrop that KETRACO is proposing to implement this distribution component. Due to this arrangement, there would not compensation for distribution component
wayleave serving the individual Project Affected Persons, but they will be billed for their electricity subsistence consumption as per the normal tariffs determined EPRA.

The proposed project also promotes the government’s last Mile Project which aims at facilitating the objective of affordably connecting Kenyan households to the national network grid. This is geared towards achieving universal access to electricity.

### 3.3 Project design

The proposed power distribution project will be designed and constructed according to KPLC Distribution’s Standard Specifications for overhead lines of up to 66kV.

The Total Line Length from proposed line will total 571km as follows.

- 450km of 33kV distribution line (ACSR Dog conductor)
- 110km of LV (0.4kV) distribution line (AA HD Bare 50mm2 conductor)
- 34 number of 33/0.4kV Transformers: 32*50kVA transformers + 2*100kVA transformers
- Service connection to consumers: 300 single phase meters to consumers and 30 three phase meter connections to consumers
- Last mile connections included 10km of single phase aluminium cable (10mm2) and 2km of ABC three phase connections (4*25mm2)
- 1km of 33kV underground cable shall also be used

The way leave trace shall be five meters on either side of the line. The pole spacing ranges from 50 – 150 meters except where bends may attract closer spacing whereas depressions along valley landscapes will call for long spans and use of HT Poles. The project will not require addition wayleave corridor since it will utilize the existing wayleave corridor of 70 meters for the ongoing construction of Kenya-Tanzania 400KV and Isinya Namanga 132kV transmission line.

The main project’s material inputs include concrete poles, insulators, steel cross bars with clamps, stays, conductors and earthing.
3.4 Project Components

The distribution line will be supported by concrete poles on which conductors will be mounted. Design features for both components are highlighted below.

I. Concrete Poles:

- The concrete poles are designed and manufactured in accordance with Kenya Power’s Specifications or equivalent standard on pre-stressed concrete poles.
- The poles are round, Pre-stressed or Reinforced Concrete Poles as per Kenya Power’s specifications or equivalent.
- The pole is designed that its strength in transverse direction shall be sufficient to take the load due to wind on conductors, fittings and the pole.
- The surface of the pole is free from loose scale, oil, grease, clay or other material that may have deleterious effect on the bond between the reinforcement and concrete.
- The finished pole has a smooth external surface that is free from honeycombing.
- The poles incorporate an integral earthing system comprising a non-stressed internal earthing copper conductor
- The concrete poles are inspected and tested at the manufacturer’s works in presence of KETRACO Engineers to ascertain they are free from defect

II. Conductors

Specifications: Conductors comprise the core media through which, power transmission takes place. In the design of the proposed distribution line, the Wolf Conductor is preferred on account of higher efficiency of transmission, thus resulting in lower losses of energy and cumulative unserved energy. The conductors recommended for the various sub-project options are Aluminium Conductor Steel Reinforced (ACSR) “Wolf” and “Lynx” conductors which are in accordance with Kenya Power standards.

III. Lightning

The power line conductors will be protected by earthwires to dissipate lightning strikes and prevent lightning discharge to nearby objects. In addition to earthing, the public safety is guaranteed in that in case there is a short circuit, the automation system in the Substation automatically de-energizes the affected line in approximately 30 milli-seconds. It is strongly advised that the public keep off any sagging
or ground laying power lines because they could be a hazard. Community policing is strongly recommended and any broken lines, sagging or ground laying lines reported to the nearest Kenya power office directly or through the local administration.

### 3.5 Project activities

#### 3.4.1 Construction activities

Construction activities will involve the following:

a) The Contractor shall perform any site investigations in good time as may be necessary for the progress of design and construction on a sound engineering basis.

b) Supply of Civil work parts, full distribution Line accessories, tools, and delivery to project site.

c) Civil works on site including construction of access road, Drilling and concrete works

d) Distribution Line assembly, fitting, erection, loading test, Pole supports, verticality, stringing conductors, energizing the line and testing

e) Remedying of defects after functional tests

f) Throughout execution of the works, the contractor shall observe Safety and shall as appropriate, erect warning signs to warn on any potential hazards, ensure proper and efficient use of Personal Protective equipment (PPE) for all on site and observe safe work procedures.

g) Provision of spare parts, special tools and test equipment

h) Training of the proponents Operating and maintenance personnel

i) Post construction clean–up, restoration and landscaping of site followed by commissioning of the distribution line.

j) Throughout the project life, the Proponent and Contractor shall adhere to all requirements of National Environmental Management Authority (NEMA) and any other applicable legislation regarding Environmental and Socio–economic impacts.

#### 3.4.2 Input Materials

The distribution Line will be constructed in accordance with current best practice and procedures in the international energy industry that are not expected to compromise the safety of the neighboring communities as well as the general environment and to ensure the longevity and efficient operation of the power line. The following inputs will be required for construction:

(i) Line conductors

(ii) Insulators
(iii) Line cables
(iv) Earth wires
(v) Stay wires and rods

(ix) Cement
(x) Sand
(xi) Ballast
(xii) Hardcore
(xiii) A construction labour force (of both skilled and unskilled workers) etc.
CHAPTER FOUR

BASELINE INFORMATION

4.1 Biophysical environment

4.1.1 Location of the proposed project

Figure 1: Kenya Tanzania Transmission line topographical map
The project traverses through Kajiado County. The proposed project will be constructed along the transmission line to benefit the project affected persons. The locations that will benefit include: - Kaputei North; Dalalekutuk; Idamat; Purko; Longosua; Mailua and Namanga

4.1.2 Topography

The county is characterized by plains, valleys and occasional volcanic hills ranging from an altitude of 500 meters above sea level at Lake Magadi to 2500 meters above sea level in Ngong Hills as shown in Map 3. Topographically, the county is divided into three different areas name; Rift Valley, Athi Kapiti plains and Central Broken Ground.

Photo 1: Kajiado county gently sloping topography
4.1.3 Economic

The economic growth and development of the County is mainly driven by livestock rearing among the dominant community, this gives rise to livestock rearing among the dominant community. This gives rise to livestock trading for meat, milk, hides and skins.

The agricultural sector is also thriving with the establishment of horticulture farms for flower and vegetable produce for export.

Lake Magadi is the main source of soda ash in Africa and with the establishment of a factory it provides direct and indirect employment.

Deposits of gypsum, limestone and salt, provides the county with raw materials for cement production.

Sand harvesting, ballast mining and quarrying for building stones also contribute to the county’s economy.

The presence of Amboseli National Park located within the county provides the county with the opportunity of tourism though it has not been fully exploited.
4.1.4 Climate
Kajiado County lies in the semi-arid and arid zone of Kenya. The temperature ranges between 10°C at Loitoktok, the eastern slopes of Mt Kilimanjaro and 34°C at Lake Magadi. The annual average temperature in the county is 25°C. The coolest period is between July and August, while the hottest months are from November to April.

Rainfall is bimodal and ranges from 500mm to 1250mm per annum. The short rains fall between October and December while the long rains fall between March and May. There is a general rainfall gradient that increases with altitude. The bimodal rainfall pattern is not uniform across the County.

4.1.5 Geology and Soils
Kajiado County comprises the Basement System rock formation which consists of various gneiss, schists, quartzite and crystalline limestone. The Soils in Kajiado County are red, sandy and often shallow soils.

4.1.6 Surface and Groundwater Sources
The Isinya – Namanga Way leave does not cross any permanent waterways but it crosses over numerous seasonal streams used as water sources for animals during the rainy season. However, in dry season (December to March), the community rely on shallow wells, water pans and boreholes.

4.1.7 Vegetation
The predominant vegetation type in the project corridor in Kajiado County is open grassland dotted with dwarf shrubs and perennial herbs, wooded and grassed bushland, woodland and woodland forest.
4.1.8 Wildlife
The expansive undisturbed bushland and woodland in the Kenya Section of the project area is sparsely populated. The Amboseli National Park which is home to several wildlife species is approximately 35Km south-east of the transmission line corridor but not fenced. As such it is common to find wild animals especially antelopes, zebras, gazelles, wildebeests and ostriches freely grazing. There are however, no wildlife or migratory birds’ corridors in the Isinya – Namanga Section of the Transmission line corridor and the distribution component.

4.2 Socio-Economic baseline

4.2.1 Summary of the Socio-economic Situation in the Project Area
The project area covers Kajiado County. The main population group in the county is the Masai. The project traverses Kajiado County. The County fall in what is generally referred to as the Arid and Semi-arid lands.
(ASALs) in Kenya. The ASALs have low rainfall averaging about 500mm per annum, but poorly spread, particularly occurring within a month in each of the two rainy seasons in any year. Due to the poor rainfall, livelihoods in the county are mainly livestock keeping, although there is crop growing.

According to the 2009 population census, Kajiado County had a population of 687,312 people and a population density of 31 persons to the square kilometer. The county had a poverty rate of 11.6% in 2009 and was ranked the richest in the country. This is mainly the result of its close proximity to Nairobi and the fact that majority of the people who live in the county have bought land, built houses that they live in and work in Nairobi.

It should be noted that the project under review as it traverses some of the land owned by the Masai who are relatively poor compared to the middle class people who live mainly in Kiserian, Isinya, Rongai and Ngong areas of the county.

Kajiado County is largely pastoralist and the livestock populations are generally high. However, about 41 per cent of the households or nearly 84,803 households in the county are involved in crop farming. The main crops grown include maize and beans, tomatoes and onions, and an assortment of vegetables and fruits.

4.2.2 Socio-Economic of Households in the Project affected Areas

The Kenya-Tanzania Power Interconnector 400kV Transmission Line Project traverses Kajiado County only. The project affected persons (PAPs) are therefore distributed over a large area between Isinya and Namanga. Their socio-economic characteristics are varied because the affected persons are found in both rural and urban areas. Those in the rural areas are engaged mainly in livestock production and limited subsistence crop farming or both, while those in urban areas are involved in commercial activities as well as crop and/or animal production to a limited extent. Therefore, the livelihoods that will be affected by the project straddle not just the rural – urban divide but also the crop – livestock production divide.

4.2.3 Access to Infrastructure

The project area is served with a fairly good road network which connects Kajiado and Namanga via Bisil. The road is tarmac. Feeder roads in the project area are murram in fairly good condition. Piped water is
supplied to the major towns of Kajiado and Namanga. The interior areas have challenges as far as water is concerned. Alternative sources include Wells and Boreholes.

In terms of access to services, Kajiado County is not significantly different from the other counties in Kenya. The access to infrastructure outlook for the county is shown below:

<table>
<thead>
<tr>
<th>Table 1: Access to Infrastructure in Kajiado County in 2009</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td><strong>Paved roads (as % of total roads)</strong> – 5.9%</td>
</tr>
<tr>
<td><strong>Good/fair roads (as % of total roads)</strong> – 38.4%</td>
</tr>
<tr>
<td><strong>Source</strong>: KNBS</td>
</tr>
</tbody>
</table>

4.2.4 Occupation and Income Generation

Majority of the PAPs are pastoralists keeping cattle, goats, sheep, donkeys, indigenous chicken and camels. Some cultivate subsistence crops such as maize, beans and bananas. There were cases where the household head is either doing small business in the nearby towns or are far off into the cities doing business or employed. Those employed locally work at the shopping centers while others are teachers in the local schools. Majority of the PAPs generate income from livestock keeping, food crop farming and trade.

4.2.5 Energy

The project area is served with electricity but majority of the homes that are on the ROW do not have electricity connected to individual households. The main source of fuel is charcoal and firewood. Many of the PAPs living within the project area largely use charcoal and firewood for cooking and paraffin and solar panels for lighting. They however requested to be considered for electricity connection.
4.2.6 Issues related to Gender, Poverty and Vulnerable Groups

A majority of the Household Heads were male while a few are female. Part of the reason for this kind of outlook relates to the fact that the one major population group in the Kajiado County that host the project namely the Maasai are patriarchal and hence property in land and structures are socially defined to belong to male adults and thus the legal owners. These were therefore registered for purposes of valuation and registering for compensation. This calls for concerted effort to mainstream women’s views and opinions in the process of paying out compensation and putting together sufficient monitoring processes to ensure that women and children benefit from compensation resources or pay out.

Kajiado County has a poverty rate of 11.6% in 2009 and was ranked the highest in the country. This is mainly the result of its close proximity to Nairobi and the fact that majority of the people who live in the county have bought land, built houses that they live in and work in Nairobi. It should be noted that the project under review traverses some of the land owned by the Maasai who are relatively poor compared to the middle class people who live mainly in Kiserian, Isinya, Rongai and Ngong areas of the county.

Due the significant population that does not have any formal education, illiteracy is high. They are vulnerable and require special assistance to ensure they do not fall prey to fraudsters on compensation. The households where the household heads are man the woman and child become vulnerable due to patriarchal nature of the society.

4.2.7 Commercial Activities

The main commercial activity carried in the project area is livestock farming that is largely carried out in Kajiado County. Horticultural and subsistence farming is carried out in the area around Isinya. Beekeeping, charcoal burning, brick making, sand harvesting and limestone mining are important commercial activities in the county. The major towns like Kajiado and Namanga host a cross section of commercial activities including shops, hotels, cinemas etc and also the administrative centers for the counties.

4.2.8 Access to Financial Services

The project area is served with various financial institution within Namanga and Kajiado towns having branches of virtually all the main banks in Kenya. There is a Kenya Commercial Bank and Equity Bank Branches in Namanga. There are post offices in all the major towns along the project area. The local people
appreciate the presence of this financial institutions and related facilities. These financial institutions will be useful in helping the PAPs have easy access to the compensation money when paid out by KETRACO
CHAPTER FIVE

STAKEHOLDER ENGAGEMENT AND INFORMATION DISCLOSURE

5.1 Introduction
The EMCA Cap 387 calls for effective stakeholder participation and public consultation in the EIA process, this case an ESIA. Public consultations and participation ensures that the views of the affected and interested parties are incorporated as early as possible in the project design and in effect minimizing the potential unexpected opposition of the development project and potential adverse effects to the environment. It is also very beneficial in incorporating the views of the public into the design process for the adoption of the best workable models and systems since the local people know best what suits them.

Stakeholder consultation was undertaken among people living in the environs of the proposed project as an integral part of the ESIA project study. The aim was to ensure that all stakeholder interests were identified and incorporated in project development; at planning, implementation and operation phases. These meetings enabled interested and affected parties to contribute their concerns (views and opinions on the proposed project) which might have been overlooked during the scoping exercise. Findings of stakeholder analysis were very important in predicting impacts and development of ESMP.

5.2 Objectives of stakeholder engagement
The main objective of this exercise was to inform the relevant stakeholders about the project and its’ likely effects, which in turn would incorporate their inputs, views and concerns; and thus enable their views to be taken into account during the decision-making. The specific objectives of the consultations were to:

- inform stakeholders
- gain their views, concerns and values
- take account of public inputs in decision making
- influence project design
- obtain local knowledge
- increase public confidence
- improve transparency and accountability in decision-making
- reduce chances of conflict through early identification of contentious issues
5.3 Standard and guidance on stakeholder engagement
under the laws of Kenya, several statues require the participation of stakeholders in projects especially
where the project are likely to affect stakeholder livelihood directly or indirectly. Pertinent legislation
includes:

- The Constitution of Kenya of 2010
- The Environment Management and Coordination Act (EMCA), Cap 387
- The Environment (Impact Assessment and Audit) Regulations of 2003
- The Occupational Safety and Health Act of 2007

5.4 Identification of stakeholders
The first step in the process of public participation process was stakeholder identification (determining
the project stakeholders and their key groupings). Stakeholder identification was to determine all
organizations and individuals who may be directly (neighboring community, workers on site) or indirectly
(County Government of Kajiado, physical planners) affected positively or negatively by the proposed
project. In the end, the stakeholders were grouped into two main categories depending on their various
needs, interest, and potential influence to the project. These included:

- Primary stakeholders- those directly affected by the project. In this case community members
  who are directly affected by the project and those likely to benefit from the project. Both men
  and women were consulted.
- Secondary stakeholders- those indirectly affected by the project but influence development
  through project implementation. These include the relevant agency, government line ministries
  and departments, existing established companies and the local administration in Kajiado County.

5.5 Tools and Methods of Engagement
A structure questionnaires was used to collect views and opinions from key stakeholders and the general
public on the project. It contained sections where the interviews filled her/his opinion on the
environmental and socioeconomic aspects on which the project may have an impact on and the measures
they may want to see in place to prevent, reduce, avoid or manage the negative impacts.

5.6 Approaches to Stakeholder Consultations
As part of the ESIA process for the proposed project, stakeholder consultations were undertaken. A
detailed stakeholder’s consultation for this study was undertaken from 3rd to 16th December 2018 and
16th to 29th February, 2020. The various interest groups were involved in a participatory process to ensure
that all the stakeholders including target beneficiaries and persons affected by the project are involved
through sharing of information, pointing out issues of concern and suggesting solutions on how various areas of conflict can be addressed.

The purpose of these meetings was to ensure that all-important environmental, social, and economic issues relating to the project are clearly understood by all stakeholders to enable them to make informed decisions on the project including endorsement and provision of information and recommendations toward enhancement of positive impact and mitigation of negative impacts. This will go a long way in enhancing ownership and sustainability of the project.

Several meetings were held with various stakeholders including government ministries and departments, institutions within Kajiado County and local community members were consulted through a public forum facilitated by the local chief. Various aspects of the project were passed on to the stakeholders including the scope, infrastructure, expected benefits, and environmental aspects; and their views were sought. The stakeholders were given opportunities to air their views and bring out the issues that were of concern to them. Attendance list of the public consultation meeting held is attached to the report (Appendix IV). The meeting addressed among others issues, including:

- The project overview
- Socio-economic aspects including anticipated project benefits;
- Community participation in the project;
- Environmental and social issues likely to be affected
- Proposed mitigation measures for identified effects and
- Probable inputs from the community members

**Key stakeholders Consulted**

The ESIA team identified the following as the lead agencies as regards to the proposed project:

1. Kajiado County Commissioner
2. Kajiado County Secretary
3. County Director of Health – Kajiado
4. Public Works and Energy, Kajiado County Government
5. Kenya Forest Service-Ecosystem Conservator
6. Ministry of Water Kajiado County
7. Ministry of Public Services, Youth & Gender Affairs – County Director
8. County Director, Environment (NEMA)
9. Department of Environment- Kajiado County
12. Department of Water, Kajiado County
13. Department of Physical Planning and Environment
14. Department of Public Health

Public baraza

Three public barazas were held in the first consultation as per the table below:

Photo 9: Public Baraza at Empeut Hotel, Dalalekutuk Location
5.7 Outcome of the Stakeholder consultations

Stakeholders consulted gave both positive and negative views, as well as suggestions for the proponent to consider during construction and operation phases of the proposed distribution lines.

Advantages of the project as identified by diverse stakeholders were as follows:

- Project is a manifestation of government’s commitment to development in the project area.
- Increased security in the area, due to availability of reliable power supply.
- Introduction of small-scale businesses that depend on power availability.
- The project would result in general enhancement of the living standards of the residents.
- Improved health and education sector.
- Access to cheap and reliable power supply.
• Rise of both direct and indirect skilled and non-skilled employment opportunities in the area.

Disadvantages of the projects were identified as follows:

• Air and noise pollution during construction.
• Possibility of occurrence of accidents on the site during construction.
• Possible incidences of electrocution.
• Increase in social vices due to influx of population in the project area as a result of emergence of new industries as well as general development in the area.

5.8 How the results of the engagement have been incorporated into the ESIA
In line with the objective of the public participation and the public participation and consultation exercise, the results of engagement have been incorporated into the ESIA in the following ways:

a. The socio-economic section of the baseline of the ESIA has been informed by this consultation and engagement process
b. Impact identification has been informed by the outcomes of the consultation and engagement process;
c. Development of mitigation measures has been informed by the consultation exercise
d. Analysis of alteration has been informed by the consultation exercise
e. The identification and mapping of stakeholders has led to the development of a comprehensive database of stakeholders to be consulted in the future.
CHAPTER SIX

ENVIRONMENT AND SOCIAL IMPACTS

6.1 Construction Phase

6.1.1 Positive Impacts

a. Informal sector benefits

During construction period the informal sector will benefit from the operations. This will involve kiosk operators who will be selling food to the workers on site. Others will include supply of water and construction materials.

b. Job Opportunities

There will be job opportunities especially to casual workers. Employment opportunities benefit both in economic and social sense. In the economic sense it means abundant unskilled labour will be used in economic production. In the social sense these young and energetic otherwise poor people will be engaged in productive employment other than remaining idle. Remaining idle may attract them into social ills like drug abuse and other criminal activities like robberies. Several workers including casual laborers, masons, carpenters, joiners, electricians and plumbers are expected to work on the site for a period that the project will start to the end.

Apart from casual labour, semi-skilled and unskilled labour and formal employees are also expected to obtain gainful employment during the period of construction. KETRACO will ensure that the contractor’s employment of casual laborers will conform to the provision of constitution of ensuring at least 30% of employment opportunities are reserved for youth and women.

c. Gains in the Local, Regional and National Economy

There will be gains in the local and national economy. Through consumption of locally available materials including: concrete tiles, iron sheets, timber and cement. The consumption of these materials, fuel oil and others will attract taxes including VAT which will be payable to the government. The cost of the materials will be payable directly to the producers.

d. Provision of Market for Supply of Building Materials

The project will require supply of large quantities of building materials most of which will be sourced locally within the County and the surrounding areas. The local community will have opportunity to supply
construction material relevant to the project but it should be noted that due to the nature of the project some of the material such as transformers will be imported.

6.1.2 Negative Impacts

a. Noise pollution

The construction works will most likely be a noisy operation due to the moving machines (mixers, tippers, communicating workers) and incoming vehicles to deliver construction materials and workers to site. The site workers are likely to be affected since noise beyond some level is itself a nuisance and can be controlled within acceptable limits.

b. Oil Spills

The machines on site may be containing moving parts which will require continuous oiling to minimize the usual corrosion or wear and tear. Possibilities of such oils spilling and contaminating the soil and water on site are real. Likewise, moving vehicles on site may require oil change. But these dangers are contained by maintaining the machinery in specific areas designated for this purpose.

c. Increased water demand

Both the workers and the construction works will create additional demand for water in addition to the existing demand. Water will be mostly used in the creation of concrete for construction works and drinking.

d. Dust Emissions

Dust will most likely be generated due to the moving vehicles transporting construction materials to site. Most of the roads serving the site are all weathered roads and there the possibility of dust emission is high.

e. Generation of Exhaust Emissions

Exhaust emissions are likely to be generated by the construction equipment during the construction phase. Motor vehicles used to mobilize the work force and materials for construction would cause a potentially significant air quality impact by emitting pollutants through exhaust emissions. The impacts of such emissions can be greater in areas where the materials are sourced and at the construction site as a result of frequent gunning of vehicle engines, frequent vehicle turning and slow vehicle movement in the loading and offloading areas.
f. Workers accidents and hazards during construction

During construction of the proposed project, it is expected that construction workers are likely to have accidental injuries and hazards. Because of the intensive engineering and construction activities including erection, metal grinding and cutting, concrete work, steel erection and welding among others, construction workers will be exposed to risks of accidents and injuries. Such injuries can result from accidental falls from high elevations, injuries from hand tools and construction equipment cuts from sharp edges among others.

g. Possible exposure to workers to diseases

During construction phase, workers are likely to be exposed to diseases from building materials. It is therefore recommended that before the construction commences, there is need for the materials to be well inspected according to the occupational health and safety standards. Workers are required at all time to be equipped with proper PPE.

h. Solid Waste Generation

During construction solid waste will be generated. These include papers used for packing cement, Plastics and timber remains among others. Dumping around the site will interfere with the aesthetic status of the area. This has a direct effect to the surrounding community. Disposal of the same solid wastes off-site could also be a social inconvenience if done in the wrong places. The off-site effects could be aesthetic, pest breeding, pollution of physical environment, invasion of scavengers and informal recycling communities.

i. Extraction and Use of Building Materials

Building materials such as hard core, ballast, cement, rough stone and sand required for construction of the proposed project will be obtained from quarries, hardware shops and sand harvesters who extract such materials from natural resource banks such as rivers and land. Since substantial quantities of these materials will be required for construction of the buildings, the availability and sustainability of such resources at the extraction sites will be negatively affected as they are not renewable in the short term. In addition, the sites from which the materials will be extracted may be significantly affected in several ways including landscape changes, displacement of animals and vegetation, poor visual quality and opening of depressions on the surface leading to several human and animal health impacts.
j. **Energy Consumption**

The project will consume fossil fuels (mainly diesel) to run transport vehicles and construction machinery. Fossil energy is non-renewable and its excessive use may have serious environmental implications on its availability, price and sustainability.

k. **Visual and Aesthetic Impacts**

The physical presence and profile of the proposed project will alter the visual and aesthetic effects of the surrounding area.

6.2 **Operation Phase**

6.2.1 **Positive Impacts**

i. **Employment Generation**

Employment opportunities are one of the long-term major impacts of the proposed project that will be realized after construction and during the operation and maintenance of the distribution line. These will involve engineers, technicians, and craftsmen.

ii. **Security**

Security will be enhanced within the project area due the increasing in the lighting system

iii. **Improved livelihood**

Locals will be able to electrify their homes and therefore be able to work for longer hours. It will also enable the local to introduce value additions to their farm produce

iv. **Reduction in respiratory health diseases**

Electricity provides an option for source of energy for cooking. This will reduce dependence on wood as a source of energy which is characterized by release of smoke that leads to respiratory health problems in the long run.

v. **Increase in water supply**

Electricity supply will enable the fitting of water pumps to community boreholes and water distribution. This will increase the number of people getting access to clean water and enhance reducing exposure to waterborne diseases.
vi. **Industrialization**

Electricity supply will enable establishment of both large and small scale industries such as Jua kali sector. This will improve the local economy and a boost country’s economy.

### 6.2.2 Negative Impacts

i. **General repairs and maintenance**

The distribution line will be subject to maintenance regularly due to wear and tear. This may include replacement of transformers, poles and the conductors.

ii. **Electrocution**

Electrocution is death or serious injury caused by electric shock, electric current passing through the body. This can only happen when there is a contact of body with the conductor. This will be very unlikely to happen; however, residents will have to be cautious with electric cable especially within their homes.

### 6.3 Decommissioning Phase

#### 6.3.1 Positive Impacts

a) **Rehabilitation**

Upon decommissioning the project, rehabilitation of the project site will be carried out to restore the site to its original status. This will include replacement of topsoil and re-vegetation which will lead to improved visual quality of the area.

b) **Employment Opportunities**

Several employment opportunities will be created for the demolition staff.

#### 6.3.2 Negative Impacts

a) **Solid Waste**

Demolition of the project buildings and related infrastructure will result in large quantities of solid waste. The waste will contain the materials used in construction including concrete, metal, drywall, wood, glass, paints, adhesives, sealants and fasteners. Although demolition waste is generally considered as less harmful to the environment since they are composed of inert materials, there is growing evidence that large quantities of such waste may lead to release of certain hazardous chemicals into the environment. In addition, even the generally non-toxic chemicals such as chloride, sodium, sulphate and ammonia which...
may be released as a result of leaching of demolition waste, are known to lead to degradation of groundwater quality.

b) Dust

Minimal quantities of dust will be generated during demolition works.

6.4 Proposed Mitigation Measures

The following are proposed mitigation measures to avoid, offset or minimize the identified negative impacts.

i. Noise Pollution

Ensure that noise levels emanating from machinery, vehicles and noisy construction activities (e.g. excavation, blasting) are kept at a minimum for the safety, health and protection of workers within the vicinity of site and nearby communities.

The contractor will adhere to the EMCA Noise and Excessive Vibration Pollution Control Regulation, 2009 and will be required to implement noise control measures amongst exposed work force and community. This will include provision of hearing protective devices such as ear plugs and ear muffs; avoiding construction or demolition activities during the night, education and awareness programs and creation of a buffer to propagate against noise pollution among other noise control measures.

ii. Generation of Exhaust Emissions

To mitigate against exhaust emissions, the proponent is advised to:

- sensitize truck drivers and machine operators to switch off engines when not in use;
- regularly service engines and machine parts to increase their efficiency and reduce generation of exhaust emission; and
- where feasible use alternative non-fuel construction equipment.

iii. Dust Emissions

The proponent will endeavor to minimize the effect of dust on the surrounding environment resulting from site clearance, excavation, spreading of the topsoil and demolition works to ensure protection of
health and safety of workers and communities. Control measures will include, use of PPE; and observing set speed limits among other measures.

iv. Solid and Liquid Waste Generation

The construction phase will lead to generation of construction wastes from the civil works and operations on the materials involved in the process. These wastes include metal cuttings, rejected materials, plastic paper bags, wood shavings, food wastes, surplus materials, among others. This type of waste poses risks to both human and environmental health because they are either biodegradable like (food waste) or non-biodegradable wastes. Risk to human such as cuttings, piercing and the environmental risk is visual impacts, chocking and blockage of drainage systems. The waste will be segregated on site before collection by a license waste handler to designated waste disposal site. Some of the waste material may be reused for other purpose within the site.

To avoid waste generation or to minimize the amount of waste generated, the following measures are recommended; -

- use of an integrated solid waste management system i.e. the 3 R’s: Reduction at source, Reuse and Recycle;
- accurately estimate the dimensions and quantities of materials required;
- use of durable, long-lasting materials that will not need to be replaced as often, thereby reducing the amount of construction waste generated over time;
- providing facilities for proper handling and storage of construction materials to reduce the amount of waste caused by damage;
- use of building materials that have minimal or no packaging to avoid the generation of excessive packaging waste; providing waste collection bins at designated points on site;
- disposing waste more responsibly by contracting a registered waste handler who will dispose the waste at designated sites or landfills only and in accordance with the existing laws.
- In addition, all drainage and effluent from storage areas, workshops and camp sites shall be captured and treated before being discharged into the drainage system in line with applicable government water pollution control regulations;
- construction waste shall not be left in stockpiles along the road, but removed and reused or disposed of on a regular basis; and
• proper procedures for the management of human waste will be put in place in order to prevent outbreak of diseases;
• place in strategic places signs against littering and dumping of wastes;
• audits waste generation and develop Waste Reduction Action Plans (WRAP).

v. Oil Spill Hazards

The proponent will endeavor to prevent petroleum products that might be used in the project which includes bitumen, oils, lubricants and gasoline from contaminating soils and water resources (ground and surface water). To accomplish this, the proponent will:

• install oil trapping equipment in areas where there is a likelihood of oil spillage;
• collect the used oils and re-use, re-sell, or dispose off appropriately using expertise from licensed waste handlers.
• servicing of equipment be done off the site within designated approved garages.

vi. Destruction of Existing Vegetation and Habitats

To ensure minimal destruction of vegetation and habitats, the contractor should ensure vegetation clearance is minimized and localized to areas of construction only.

vii. Impacts on Workers’ and Community Health and Safety

The contractor will ensure that:

• all the workers are well equipped with required PPEs to ensure health and safety of the workers and the general public during construction and decommissioning of the proposed project as stipulated in the Occupational Safety and Health Act, 2007.
• Regular training and sensitization of workers

viii. Incidences of Electrocution

To reduce incidences of electrocution, the proponent will:

• put in place a maintenance system to ensure physical integrity of equipment is maintained;
• deactivate and properly ground live wires before repair works are performed;
• ensure that live wire works is conducted by trained personnel;
• place warning signs on strategic places;
• conduct periodic awareness and sensitization campaigns for the neighboring communities.
ix. **Perceived Danger of Electrostatic and Magnetic force**

However, there will be minimal EMF on the proposed distribution line, the proponent will still conduct education and awareness campaigns to dispel fear among workers and community on the effects of electrostatic and magnetic forces.

x. **Increase in Social Vices**

To minimize project effects on local social set up, the proponent will;

- conduct periodic sensitization forums for employees on ethics, morals, general good behavior and the need for the project to co-exist with the neighbors;
- offer guidance and counseling on HIV/AIDS and other STDs to employees;
- provide condoms to employees; and
- ensure enforcement of KETRACO’s policy on sexual harassment and abuse of office.
- The contractor will also be obligated to conducted regular education and training through toolbox talks to ensure that expectations of this policy are achieved.

xi. **Worker Influx Management**

Unskilled labour will be sourced locally while skilled labour will be sourced both locally and without. Gender parity will be considered in sharing of these opportunities where possible. During public consultation, the local community acknowledged that they have benefitted from employment and business opportunities which arose from construction of Isinya Substation.

Since majority of the workers will be from the local community, there will be no risk of increase in food prices in local markets. However, there is a risk of workers being underpaid by the subcontractor who is usually not answerable to KETRACO. There will be no risk of cultural misunderstanding/exploitation as non-locals will be staying in nearby town. For this reason, there will be no risk of shortage of accommodation or rent going up. There is real possibility of members of the local community employed in the project engaging more in alcohol consumption and extra marital affairs with their fellow local ladies.

6.5 *Project Implementation*

The Project Implementation Team will be conducting:
Quarterly ESMP monitoring to conform contractor compliance with ESIA/ESMP and social management provisions of bidding documents

Regular review of community complaints registers and compliance reports issued by contractors

Quarterly reporting to the ADB on social performance and compliance issues facing project

Mobilizing and facilitating consultation meetings with community stakeholders during field visits

Tracking and recording number and gender of project workers recruited by contractors within /outside communities.

The contractor will

Fully execute relevant social provisions of ESMP and bidding documents

Appoint a community focal point to manage complaints and community relations

Maintain community complaints register and respond to complaints as they arise within a pre-determined timeframe.

Regularly report to KETRACO’s Project Manager on complaints and how they were resolved.
CHAPTER SEVEN

ANALYSIS OF PROJECT ALTERNATIVES

An environmental impact assessment study is done in order to identify and access alternative development project. It is very important that development project of such magnitude be assessed in order to identify project alternative which should be based on less negative impacts and offer a better cost benefit. The “no project” is the important alternative to be analyzed because it helps the proponent to quantify the impacts from the project in alignment with those which would have taken place without the project.

7.1 The “No Project” Option

Baseline information defines the no-action alternative which is crucial in the appraisal of impacts since other alternatives are measured with reference to it. There will be no any significant negative effects on either bio-physical or the socio-culture, an assurance which is outstanding from the qualitative analysis and summary of the proposed site for the project. The Project is crucial to aid in improvement of environmental situations to avoid possible deterioration. The no-project option will limit the occurrence of harmful incidents arising from the project. The no-project option will however have several disadvantages:

- Population growth will increase demand for electricity thus making consumers to continually suffer from shortage and unstable supply.
- Employment opportunities will be limited due to expansion of business activities that would have been spurred by availability of electric power.
- The failure of electric power will affect the functionality of institutions such as the Konza City, schools, Hospitals, Churches, Mosques etc. which rely on electricity.
- Information flow and Public education through electronic media e.g. Television will also be affected.
- The Government will be seen to have reneged to its promise of providing electric energy to more of its citizens through working and achieving vision 2030.
- There will be loss of Productivity and reduced ability to create wealth.

Generally, the long term positive impacts of the proposed project outweigh the negative effects which can be easily mitigated.
7.2 Alternative Materials and processes

a. Transformer

Highly refined mineral insulating oils are used to cool transformers and provide electrical insulation between live components. Sulfur hexafluoride (SF6) may also be used as a gas insulator for electrical switching equipment and in cables, tubular transmission lines and transformers. Polychlorinated Biphenyls (PCB) can be used as a dielectric fluid to provide electrical insulation. SF6 is a greenhouse gas with a significantly higher Global Warming Potential (GWP) than carbon-dioxide. PCB is a highly toxic substance that is no longer commonly used for electrical insulation. For this project the proponent is advised to use mineral insulating oil for cooling and insulation and to minimize or completely stop the use of SF6 and PCB.

b. Concrete poles vs wooden poles

The proposed project involves construction of distribution line. Distribution lines use poles unlike the use of pylons because of short stringing span and use of light conductors. Wooden, steel or concrete poles are normally used in construction of distribution line. Various variable use considered when determining the type of poles to be used. In general, the line supports should have the following properties:

- High mechanical strength to withstand the weight of conductors and wind loads etc.
- Light in weight without the loss of mechanical strength.
- Cheap in cost and economical to maintain.
- Longer life.
- Easy accessibility of conductors for maintenance.

<table>
<thead>
<tr>
<th>Wooden</th>
<th>Pros</th>
<th>Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>They are usually cheaper</td>
<td>Results in environmental destruction</td>
</tr>
<tr>
<td></td>
<td>Easily available</td>
<td>The tendency to rot below the ground level</td>
</tr>
<tr>
<td></td>
<td>Provide insulating properties</td>
<td>Comparatively smaller life (20-25 years)</td>
</tr>
<tr>
<td></td>
<td>Treated wood poles use less energy and resources, offset fossil fuel use and have a less environmental impact than concrete</td>
<td>less mechanical strength and</td>
</tr>
<tr>
<td></td>
<td>limit the accumulation of greenhouse gases</td>
<td>require periodical inspection.</td>
</tr>
</tbody>
</table>
- promoted efforts towards 10% forest cover

### Concrete

<table>
<thead>
<tr>
<th>Pros</th>
<th>Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td>- they have greater mechanical strength</td>
<td>- very heavy</td>
</tr>
<tr>
<td>- longer life span</td>
<td>- high cost of transport owing to their heavyweight</td>
</tr>
<tr>
<td>- permit longer span</td>
<td>- 40% more expensive than wooden pole</td>
</tr>
<tr>
<td>- require little maintenance</td>
<td>- Fragile</td>
</tr>
<tr>
<td>- good insulating properties</td>
<td>- Increases greenhouse gas emission</td>
</tr>
<tr>
<td>- used in areas prone to bush fires and wet or swampy places.</td>
<td></td>
</tr>
</tbody>
</table>

### Fiber Reinforced Polymer (FRP)

<table>
<thead>
<tr>
<th>Pros</th>
<th>Cons</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Lowest life cycle costs</td>
<td>- More expensive than wood but less expensive to concrete</td>
</tr>
<tr>
<td>- Longest expected lifespan of up to 80 yrs.</td>
<td></td>
</tr>
<tr>
<td>- Can be designed to a variety of shapes and forms</td>
<td></td>
</tr>
<tr>
<td>- Light weight compared to treated poles, concrete and steel.</td>
<td></td>
</tr>
<tr>
<td>- Easy to transport and install</td>
<td></td>
</tr>
<tr>
<td>- Maintenance-free and are quite resilient to large overloads</td>
<td></td>
</tr>
<tr>
<td>- Electrically non-conductive</td>
<td></td>
</tr>
<tr>
<td>- Require less energy to manufacture, ship and install</td>
<td></td>
</tr>
<tr>
<td>- Does not release any chemicals into the environment.</td>
<td></td>
</tr>
<tr>
<td>- FRP are biodegradable, recyclable and reusable in control industrial processes</td>
<td></td>
</tr>
</tbody>
</table>

FRP are the most preferred poles to be used due to its economical and environmentally sustainability. However, this type is not locally available. Wood is a versatile material for structural purposes and has
been used for a very long time throughout human history. The proposed project will therefore utilize the concrete and wooden poles.

7.3 Project Line routing
Option 1: Use of Wayleave existing corridor

This option construction of new 33kV and 11kV distribution line along the existing wayleave corridor. This option will minimize the vegetation clearing since vegetation is already cleared for the ongoing construction of 132kv and 400kv transmission line.

However, this option will result in utilization of more unnecessary resources such as conductors and poles.

Option 2: Use of road reserves and existing distribution lines.

This option involves connecting the project affected person from the existing distribution lines done by Kenya Power and REREC.

This option will maximize on the use of available construction material to connect more people and other public facilities. Maintenance of the distribution line will be easily accessible.

This is the most preferred option.

7.4 The Preferred Alternative
Following the analysis of the above alternative, it is considered that the proposed project considered all optimal options in the design, location and technology and should be implemented with the guidance of environment Management plan.

7.5 Proposed development justification
After assessing and studying the proposed development by KETRACO for both positive and negative impacts and comparing it to possible alternatives as discussed above it has been found to be the most suitable development with all factors considered. There were no foreseeable adverse effects that would justify the non-execution of the project, thus the long term benefits of the project warrant its commission. These benefits include increased supply of electricity to the broader population, the resultant effects of this for domestic and commercial use of electricity and the consequential enhancement of wellbeing of Kenyan
## CHAPTER EIGHT

### ENVIRONMENTAL AND SOCIAL MANAGEMENT PLAN (ESMP)

#### 8.1 Construction Phase ESMP

**Table 2: Construction Phase EMP**

<table>

CHAPTER NINE

ENVIRONMENTAL AND SOCIAL MONITORING PLAN (ESMoP)

9.1 Introduction
This section of the ESIA sets out the environmental, health & safety and community-related monitoring control and measures that the proponent KETRACO and its’ contractors will implement to avoid, minimize and manage potentially adverse environmental, health & safety and community-related risks and impacts identified as part of this ESIA. Similarly, the ESMoP is geared towards ensuring that the project operates in conformance with applicable laws and regulations within Kenya and internationally.

CHAPTER NINE

RECOMMENDATIONS AND CONCLUSION

9.1 Introduction
An Environmental and Social Management Plan (ESMP) outline has been developed to ensure sustainability of the site activities from construction through operation to decommissioning. The plan provides a general outlay of the activities, associated impacts, and mitigation action plans. Implementation timeframes and responsibilities are defined, and where practicable, the cost estimates for recommended measures are also provided.

A monitoring plan has also been developed and highlights some of the environmental performance indicators that should be monitored. Monitoring creates possibilities to call to attention changes and problems in environmental quality. It involves the continuous or periodic review of operational and maintenance activities to determine the effectiveness of recommended mitigation measures. Consequently, trends in environmental degradation or improvement can be established, and previously unforeseen impacts can be identified or pre-empted.

It is quite evident from this study that the construction and operation of the proposed project will bring positive effects including improved supply of electricity, creation of employment opportunities both skilled and unskilled (safety officer, welders, masons, drivers etc.), gains in the local and national economy, provision of market for supply of building materials, Informal sectors benefits, Increase in revenue, Improvement in the quality of life for the workers and community members, and Improved security.

Considering the proposed location, construction, management, mitigation and monitoring plan that will be put in place, the project is considered important, strategic and beneficial and given that no immitigable negative impacts were encountered and that no community objection was received, the project may be allowed to proceed.
9.2 Recommendations

Following the impact analysis presented in the previous sections, the following recommendations were made:

- The proposed project to be implemented in compliance with the relevant legislation and planning requirements
- The proponent to ensure implementation of the mitigation measures provided in the EMP
- The proponent to monitor implementation of the EMP using the developed EMoP
- The proponent to conduct annual Environmental Audits and submit to NEMA
- NEMA to consider, approve and grant an Environmental Impact Assessment License Variation to the proponent

9.3 Conclusion

From the foregoing, it is noted that;

- no immitigable negative impacts were encountered
- No objection from the community was received
- Identified potential negative impacts can be mitigated
- Benefits to the community, region, and the country at large are immense

The ESIA team, therefore, recommends to NEMA to consider, approve and grant an Environmental Impact Assessment License to the proponent and the proponent to implement the project with strict adherence to the proposed ESMP

APPENDIX I: Key Informant Questionnaires
KEY INFORMANT/COMMUNITY QUESTIONNAIRE
PROPOSED RURAL ELECTRIFICATION ALONG 400kV KENYA-TANZANIA POWER INTERCONNECTOR PROJECT (KTPIP), LOT K2, KAJIADO COUNTY

Please complete and return to either of the addresses above

Kenya Electricity Transmission Company Limited (KETRACO) is a 100% Government owned state corporation that was incorporated on 2nd December 2008 and registered under the Companies Act, Cap 486 pursuant to Sessional Paper No. 4 of 2004 on Energy. Its mandate is to plan, design, construct, own, operate and maintain high voltage electricity transmission lines and regional power interconnectors that forms the backbone of the National Transmission Grid, in line with Kenya Vision 2030. The voltage rating of the transmission lines and its associated substation include 132kV, 220kV, 400kV and 500kV (HVDC).

The company proposes to construct distribution lines, as part of CSR to boost power supply and reliability. The project is intended to benefit the community living along the proposed wayleave corridor for construction of 400kV transmission line.

To ensure that the project is implemented in an environmentally and socially sound manner, the Proponent (KETRACO) is conducting an Environmental and Social Impact Assessment (ESIA) for the proposed project. This will help us obtain information that will be used to identify potential environmental and socioeconomic impacts of the proposed project and hence propose adequate mitigation measures to be adhered to during project implementation.

Participation of interested and affected parties in the ESIA is a requirement of the Environmental Impact Assessment and Coordination Act, Cap 387. As an identified stakeholder, you are requested to document your views, opinions and concerns regarding the proposed project.

This questionnaire acts as a guide for the respondent to provide relevant information on the proposed project. All the information obtained shall be used entirely for the proposed study and shall be treated confidentially. We appreciate your cooperation and thanks for your willingness to participate in this exercise.
COMMENTS (please use separate sheets if you wish)

1. In your opinion, what Environmental, Social and Economic benefits do you think will arise from the proposed project?
   a) [Space for answer]
   b) [Space for answer]
   c) [Space for answer]
   d) [Space for answer]
   e) [Space for answer]
   f) [Space for answer]

COMMENTS (please use separate sheets if you wish)

1. In your opinion, what Environmental, Social and Economic benefits do you think will arise from the proposed project?
   a) Connectivity to the local community.
   b) Possibility of increased job opportunities.
   c) Improvement of business due to power connections.
   d) 
   e) 
   f) 
   g) 
   h) 
   i) 

2. In your opinion, what Environmental, Social and Economic negative impacts do you think will result from the proposed project?
   a) Clearing of vegetation reducing the cover.
   b) Interference with biodiversity and habitat movements.
   c) Possibility of noise pollution during installation.
   d) 
   e) 
   f) 
   g) 
   h) 
   i) 

3. Do you have any suggestions or measures to mitigate problems identified in question 2 above?
   a) Minimal clearing where necessary.
   b) Minimal interference while designing.
   c) Avoid wildlife corridors and hot spots.
   d) 
   e) 
   f) 
   g) 
   h) 

4. In your opinion, should the project be implemented? Yes [ ] No [ ]
   If YES/NO, why?
   Yes will be beneficial to the community.

5. Do you have any other comments regarding this project?
   Hope the project will boost the economy of the county and the country at large.

6. Please provide your contact details for purposes of authentication.

</tr>
</tbody>
</table>

Thank you for your participation
1. In your opinion, what Environmental, Social and Economic benefits do you think will arise from the proposed project?
   a) To conserve any destroyed plants. Tree planting.
   b) Mitigation of soil erosion in areas soil erosion is prone.
   c) Training of locals on new skills & technologies.
   d) Employment of locals & unskilled.
   e) Business during construction of pipelines.
   f) Interaction of locals with new tribes & cultures.
   g) Market of local available goods.
   h) Scholarships for local learners.
   i) Social responsibilities & incentives for locals.
   f) Locals can benefit from proper connection.

2. In your opinion, what Environmental, Social and Economic negative impacts do you think will result from the proposed project?
   a) Displacement of people.
   b) Enhancement of soil erosion from big vehicles.
   c) Diseases outbreak due many people living in close proximity.
   d) Erosion of local culture.
   e) Behavioral & societal due to mix culture.
   f) School dropouts due to need for cash.
   g) Resistance from locals.
   h) Political interference.

3. Do you have any suggestions of measures to mitigate problems identified in question 2 above?
   a) Put in place mitigation to prevent soil erosion.
   b) HIV & AIDS awareness.
   c) Avoiding employing underage.
   d) Consult leaders, I would be kick-off of the project.
   e) Drawing an MOU with locals, then their leaders.
   f) Let's put in place county leadership on the project.
4. In your opinion, should the project be implemented? Yes [X]  No [ ]

If YES/NO, why?

⇒ Because it’s County & National govt to have all the houses linked with power electrically.
⇒ Also it’s power connection with proper development in rural areas

5. Do you have any other comments regarding this project?

⇒ Would suggest that these houses should be given priority since public utilities are taken care of by Rural - Electrification Authority.
⇒ Would also suggest that politics should not be given any chance to control these projects.

6. Please provide your contact details for purposes of authentication.

COMMENTS (please use separate sheets if you wish)

1. In your opinion, what Environmental, Social and Economic benefits do you think will arise from the proposed project?
   a) Will improve lighting of families hence improving attendance
   b) Will help reduce use of paraffin hence reduce pollution
   c) Will stimulate various economic activities e.g. welding
   d) Will help create job opportunities for youth
   e) Lighting markets will help reduce
   f) 
   g) 
   h) 
   i) 

2. In your opinion, what Environmental, Social and Economic negative impacts do you think will result from the proposed project?
   a) Land under forestation will not be used for construction of buildings and planting of fruit trees
   b) Construction may lead to destruction of flora and fauna
   c) Resettlement of people living under the fall of the line
   d) 
   e) 
   f) 
   g) 
   h) 
   i) 

3. Do you have any suggestions of measures to mitigate problems identified in question 2 above?
   a) The land can be used for peaches and other activity
   b) Rehabilitation of affected areas
   c) Trying to avoid the lines from passing in settled areas
   d) 
   e) 
   f) 
   g)
4. In your opinion, should the project be implemented? Yes [ ]  No [ ]

If YES/NO, why?
- The economy of areas connected to electricity will improve. Clean energy will help reduce pollution.

5. Do you have any other comments regarding this project?
- Engage local youths in the project to empower them economically.

6. Please provide your contact details for purposes of authentication.

COMMUNITY QUESTIONNAIRE
PROPOSED KENYA-TANZANIA INTERCONNECTOR PROJECT AND ASSOCIATED DISTRIBUTION LINE

Please complete and return to either of the addresses above

COMMENTS (please use separate sheets if you wish) Do you prefer to have the question as far and wide broad?

1. In your opinion, what Environmental, Social and Economic benefits do you think will arise from the proposed project?
   a) To use the normal high line to connect all villages.
   b) Each public utility to be connected.
   c) Public schools should be given first priority.
   d) The connection should reach all the people
   e) Without prejudice of any sort.
   f) This project will actually bring a lot of development to the community.
   g) It will give people more economic advantage to open their business especially in schools where children will be able to do their work in schools.

2. In your opinion, what Environmental, Social and Economic negative impacts do you think will result from the proposed project?
   a) Unless the gases were left open to the community.
   b) It can result to death if no covering or safety were left open.

3. Do you have any suggestions of measures to mitigate problems identified in question 2 above?
   a) If only to notify the community about it.
c) To ensure there is no naked wire which will be open.
d) Everything should be put safely.
e) 
f) 
g) 

4. In your opinion, should the project be implemented? Yes [x] No [ ]
   If YES/NO, why?
   This is because it will benefit the people all together.
   special to bring light to the environment.

5. Do you have any other comments regarding this project?
   This project will bring a milestone and give the community a rise up and light up the community.

KEY INFORMANT/COMMUNITY QUESTIONNAIRE
PROPOSED KENYA-TANZANIA INTERCONNECTOR PROJECT AND ASSOCIATED DISTRIBUTION LINE

Please complete and return to either of the addresses above

Kenya Electricity Transmission Company Limited (KETRACO) is a 100% Government owned state corporation that was incorporated on 2nd December 2008 and registered under the Companies Act, Cap 486 pursuant to Sessional Paper No. 4 of 2004 on Energy. Its mandate is to plan, design, construct, own, operate and maintain high voltage electricity transmission lines and regional power interconnectors that forms the backbone of the National Transmission Grid, in line with Kenya Vison 2030. The voltage rating of the transmission lines and its associated substation include 132kV, 220kV, 400kV and 500kV (HVDC)

Environmental and Social Impact Study for proposed KTPIP was done and license (Reg. 0019999) issued on 12th November, 2013. However, the scope of the study did not incorporate the distribution line component.

To ensure that the project is implemented in an environmentally and socially sound manner, the Proponent (KETRACO) is conducting an Environmental and Social Impact Assessment (ESIA) in order to update the ESIA done for the proposed KTPIP project. This will help us obtain information that will be used to identify potential impacts of the proposed project and hence propose adequate mitigation measures to be adhered to during project implementation.

Participation of interested and affected parties in the ESIA is a requirement of the Environmental Impact Assessment and Coordination Act, Cap 387. As an identified stakeholder, you are requested to document your views, opinions and concerns regarding the proposed project.

This questionnaire acts as a guide for the respondent to provide relevant information on the proposed project. All the information obtained shall be used entirely for the proposed study and shall be treated confidentially. We appreciate your cooperation and thanks for your willingness to participate in this exercise.
1. In your opinion, what Environmental, Social and Economic benefits do you think will arise from the proposed project?
   a) The project will improve the present access.
   b) To provide local projects.
   c) Access to electric power will support the development of SME in the region.
   d) SME development will create capacity.
   e) And this improving the lives of local communities.

2. In your opinion, what Environmental, Social and Economic negative impacts do you think will result from the proposed project?
   a) The project may involve clearance of vegetation which disrupt the ecological balance.
   b) Impact of land area.
   c) Loss of vegetation, loss of habitat of nature.
   d) Vegetation is a threat to biodiversity.

3. Do you have any suggestions of measures to mitigate problems identified in question 2 above?
   a) Detailed impact assessment need to be carried out before the commencement.
   b) At the project.
   c) Any loss of vegetation should be compensated by planting more trees and plants in the region.
4. In your opinion, should the project be implemented? Yes [ ] No [ ]
   If YES/NO, why?
   Yes. The positive benefits outweigh the negative.
   Further analysis of the negative factors can be justified.

5. Do you have any other comments regarding this project?
   [Handwritten comments]

6. Please provide your contact details for purposes of authentication.

<td>1.</td>
<td>Letoya Eakok</td>
<td>Appreciate the need of the project in the area. Are there any employment opportunities for the locals?</td>
<td>Members were informed that the locals will be considered for available job opportunities. It was added that youths, women and people with disabilities will also be considered.</td>
</tr>
<tr>
<td>2.</td>
<td>Oyie Kotenek</td>
<td>Pointed out that his name was missing in the list of beneficiaries of the project</td>
<td>He was informed Mr. Felix, Wayleave Officer who was present will follow up on his issue.</td>
</tr>
<tr>
<td>3.</td>
<td>Emily Siyai</td>
<td>Are there hidden cost or deduction that will impact on wayleave compensation for high voltage project?</td>
<td>Members present were informed that the connection will be free. The only cost that will be incurred by the beneficiaries will be payment of consumed power units.</td>
</tr>
<tr>
<td>4.</td>
<td>Ntimama Naikumi</td>
<td>Pointed out that the area is covered with indigenous trees which has medicinal value and therefore should not be cut</td>
<td>Members were informed that the project will utilize the existing wayleave corridor and road reserves. This will minimize the number of indigenous trees being cut. Members were informed that the project will not require additional wayleave corridor and will only utilize existing wayleave corridor of 70 meters and road reserve.</td>

registration number 260

in accordance with the provision of the Environmental Management and Coordination Act Cap 387.

Issued Date: 1/9/2020            Expiry Date: 12/31/2020

Signature;

(Seal)

Director General
The National Environment Management Authority
Conditions For Licensing

1. This license expires on 31st December of the year it is issued.
2. The expert shall comply with code of practice and Professional Ethics for EIA/EA experts.
3. The expert shall comply with the attached conditions.

General Conditions

1. All Environmental Experts certified and registered in the accordance with the provision of relevant Regulations, may establish professional associations to complement and implement the objectives of the Code of Practice.
2. An Expert shall act professionally, accurately, fairly and in an unbiased manner in undertaking his work.
3. The Director General in consultation with relevant stakeholders, may from time to time issue guidelines for the proper conduct of registered Environmental Impact and Audit Experts.
4. Every Environmental Expert shall each year attend at least two relevant seminars organized by the authority for the purposes of improving the professional expertise of its members.
5. No Expert shall exploit the inexperience, lack of understanding, illiteracy or other lack of technical knowledge in environmental matters of a project proponent, owner or the public, for his personal gain.

Receiving Instructions

1. No Environmental Expert shall act for any project proponent unless he has received written instructions from such project proponent or his authorized agent.
2. An Environmental Expert shall not unreasonably delay the carrying out of instructions received from the project proponent or his authorized agent.
3. An Environmental Expert shall discharge his responsibilities to the project proponent with due diligence and integrity.
4. An Environmental Expert may terminate a contract on carrying out an environmental impact assessment or audit as stipulated in section 8 of the Code of Practice and Professional Ethics of EIA/EA Experts.

Carrying out an EIA/EA

1. An Environmental Expert shall follow relevant regulations or guidelines and directives issued by the Authority.
2. As Environmental Expert shall take due care and diligence to collect the relevant data to address the significant environmental issues in the various stages of the assessment or audit process and fully acknowledge the source of any data that is not the result of his findings.
3. Environmental Expert shall consult widely with all the relevant agencies, stakeholders, interested parties and the general public on all the matters that likely to affect them.
4. An Environmental Impact Assessment or Audit Report shall be based on the Terms of Reference of the Assignment and shall include all the matters relevant to the findings of the study; all the relevant matters are required by statutory provisions, and must be guided by professional standards and judgments.

Responsibility of Lead Environmental Experts

1. (1) An Environmental Lead Expert shall be responsible for the documents prepared by him/her on behalf of the project proponent.
   (2) An Environmental Expert shall guide the proponent throughout the preparation of the environmental impact assessment and/or environmental audit, and/or during implementation of the Environmental Management Plan.
   (3) An Environmental Expert shall disclose to a client or employer any relationships of conflicting or competing interests that may influence his judgment prior to the carrying out of work.

Misconduct of Environmental Experts

1. An Environmental Expert who contravenes a provision of Code of Practice and Professional Ethics shall be deemed to have committed professional misconduct and shall be subject to disciplinary action by the Authority as appropriate and as stipulated in the Code of Practice and Professional Ethics of Environmental Experts.

Disciplinary Action

1. Where an Environmental Expert is found to have committed professional misconduct by the Environmental Experts' Advisory Committee/Authority shall be punished as stated under section 19 of the code of Practice and Professional Ethics.

Appeals

1. (1) An Expert aggrieved by the decision of the Authority may apply for the review of such decision in the High Court.
   (2) if an application for judicial review shall not have been filed at the expiry of 30 days from the date of the decision of the Authority, the director general may publicize the disciplinary action taken against the Expert.
